PURPOSE OF CALL/VISIT/MEETING

SUMMARY

Greg called to say that radiological analyses at Shpack were slow. He expected to receive the α and β counts this week. He had been told by the REM Lab (Pittsburgh) that the Uranium analyses was a long tedious process and it would be a while (no estimate) before this data was received.

Greg also said that Pat Melnick (a resident) wanted to know where the results were of samples taken from her well. She was told that the data had not been received yet. I told him that all results should be sent from me and Greg understood this

ACTION REQUIRED, INFORMATION OR MATERIALS PROVIDED, ETC.

As I previously discussed with Greg he will take up DOE on their offer to QC & review the radiological data. I will also have Byron Keene look at this data.
