1.0 Introduction

This Soil Management Plan (SMP) provides information and management direction for minor residual contamination in soil that may be disturbed during work at the U.S. Department of Energy (DOE) areas of the former Laboratory for Energy-Related Health Research (LEHR) Federal Facility, also called the LEHR site, at the University of California, Davis (UC Davis). This plan also provides direction for managing any trees or shrubs that need to be removed from the DOE areas where this SMP applies. This plan is a component of the Remedial Design/Remedial Action Work Plan (DOE 2010) (RD/RAWP), which provides requirements for implementing land-use restrictions in accordance with the Record of Decision (ROD) for the DOE areas at LEHR (DOE 2009b) issued under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980.

Certain activities that only disturb shallow soil (<1 foot deep), generate de minimis amounts of soil (5 cubic yards or less), and do not require offsite disposal are not subject to the requirements of this plan.

The original version of this SMP (dated November 2010) was included in the RD/RAWP (DOE 2010) as Appendix A. To facilitate the use of this SMP as a reference document for soil and vegetation management projects and so the plan can be more readily modified in the future if needed, the SMP was issued in 2019 as a standalone plan and revised to include provisions for the management of trees and shrubs (DOE 2019). This version (Revision 0) updates the tree and shrub inventory for the DOE areas in Section 8.3 and Appendix F, and the radiological analytical methods, and expands analytical laboratory accreditation to include DOE/DOD Environmental Laboratory Accreditation Program (ELAP) for specific radiological analyses because the State of California ELAP, administered by the Division of Drinking Water at the State Water Resources Control Board, does not provide accreditation coverage for many of the radiological analytical methods required to implement this SMP.

1.1 Background

From 1958 to 1988, DOE operated the LEHR Federal Facility at the south campus of UC Davis (Figure 1 and Figure 2). Research at LEHR focused on the long-term health effects of low-level radiation on laboratory animals. The disposal of chemical and radioactive laboratory and campus waste contaminated soil and groundwater at LEHR. In May 1994, the U.S. Environmental Protection Agency (EPA) added the site to the National Priorities List. The responsibilities for the cleanup of the site were divided between DOE and UC Davis: DOE is responsible for remediating soil contamination in the DOE areas shown in Figure 2 and any associated groundwater contamination, and UC Davis is responsible for cleaning up six landfill units and any associated groundwater contamination. UC Davis is developing remedial alternatives for its areas.

In 1995, DOE demolished the Imhoff Wastewater Treatment Facility (Figure 2) as a voluntary removal action, and by 1997, DOE had completed the decontamination and decommissioning of the remaining buildings at LEHR. DOE was responsible for the remediation of residual subsurface contamination at the Radium/Strontium (Ra/Sr) Treatment Systems area; a waste burial area known as the DOE Disposal Box; onsite domestic septic tanks, associated leach fields, and dry wells; DOE disposal trenches; and the former Dog Pens (EPA 1999). By 2009,

DOE had completed removal actions that addressed the principal threats at the DOE Disposal Box area, the Southwest Trenches (SWT) area, the Ra/Sr Treatment Systems area (which included Domestic Septic System [DSS] 2, parts of DSS 1, and parts of the DSS 5 leach field [including Dry Wells A–E]), the Western Dog Pens (WDPs) area, and the DSS 3 and 6 areas (Figure 2).

Figure 1. Location of the LEHR Site, UC Davis, Solano County, California

Figure 2. LEHR Site Features

DOE has successfully completed decontamination, decommissioning, and removal actions at the DOE areas of the LEHR Federal Facility and has thereby significantly reduced impacts of the chemical and radioactive contamination on human health and the environment to levels acceptable under CERCLA for current and anticipated land uses. Residual contaminants remain at the site at concentrations that prevent unrestricted use (DSS 4 area only), or that could impact groundwater above acceptable background levels (Ra/Sr Treatment Systems area, DSSs 3 and 4, Dry Wells A–E, the SWT area, and the Eastern Dog Pens [EDPs]) as discussed below.

1.1.1 Areas Requiring No Action or No Further Action

DOE released all of the LEHR buildings to UC Davis for unrestricted use and accelerated site cleanup by completing several removal actions that addressed the principal environmental threats at the LEHR Federal Facility. Based on DOE's compliance with DOE Order 5400.5 Chg. 2, *Radioactive Protection of the Public and the Environment*, for the release of property for unrestricted use, no action or no further action is required at all LEHR buildings (62 FR 51844–51845).

In addition to no action being necessary at the LEHR buildings, based on the *Site-Wide Risk Assessment, Volume I: Human Health Risk Assessment (Part B Risk Characterization for DOE Areas)* (Weiss 2005), no further action is required at the following areas of the LEHR Federal Facility:

- DSS areas other than DSSs 3 and 4
- The DOE Disposal Box area
- The WDPs area (Figure 2)

Similarly, no action is required at the Cobalt-60 Irradiation Field because the area has no identified contamination, and there is no potential for contamination based on historical use.

Figure 2 shows all these areas and their designations.

1.1.2 Areas Requiring Additional Action

The following areas of the LEHR Federal Facility contain residual contaminants that present potential excess cancer risks above 1 in 1 million or have the potential to impact groundwater quality:

- The Ra/Sr Treatment Systems area
- DSS 3
- DSS 4
- Dry Wells A–E
- The SWT area
- The EDPs area (Figure 3)

Figure 3. DOE Areas at LEHR Subject to Land-Use Controls, Including Soil Management

1.1.3 Record of Decision

To address areas requiring additional action, DOE completed an ROD in 2009 (DOE 2009b).

The ROD documents the selection of the following remedies for the DOE areas:

- Long-term groundwater monitoring with contingent remediation and an SMP at the Ra/Sr Treatment Systems area, DSS 3, Dry Wells A–E, and SWT area[1]
- Long-term groundwater monitoring with contingent remediation, a land-use restriction prohibiting residential use, and an SMP at DSS 4
- The implementation of an SMP and groundwater monitoring for constituents of potential concern at the EDPs area
- No further action at the DSS 1, DSS 5, DSS 6, DSS 7, WDPs, and DOE Disposal Box areas

The land-use control components of the selected remedy are described in the RD/RAWP (DOE 2010) and include the development and implementation of this SMP (which was originally an appendix to the RD/RAWP and is now issued as a standalone document) to specify controls that would apply to activities that disturb the subsurface. The general requirements of the RD/RAWP and this SMP were documented in an environmental land-use covenant recorded by Solano County in 2014 (DTSC 2014) (Appendix A).

1.1.4 Five-Year Reviews

DOE has conducted two Five-Year Reviews (FYRs) for the DOE areas (DOE 2016; DOE 2018; DOE 2021a). Both FYRs concluded that DOE remedies are protective. Specific to the SMP, the 2016 FYR recommended the addition of high visibility markers for monitoring wells and survey monuments and sampling procedures for fallen trees and shrubs within or near DOE areas where residual contaminants may be present in soil. These changes were incorporated in the SMP issued by DOE in 2019 (DOE 2019). The second FYR included a recommendation to revise the SMP to identify vegetation subject to routine maintenance by grounds staff and to develop and document procedures to characterize the vegetation and manage cuttings by June 30, 2022. The sampling procedures and waste management protocols are being developed and will be incorporated in a future revision of this SMP.

1.2 Objective

The objective of this SMP is to establish policy and requirements for the management and disposal of soils generated during construction, maintenance, and other activities that might disturb contaminated soil at the DOE areas at LEHR. As an outcome of the first FYR (DOE 2016), the objective has been expanded to include establishing requirements for the management of any trees or shrubs that fall or must be removed in the SMP areas.

[1] See Section 2.9 of the ROD.

1.3 Purpose

This SMP describes specific controls required for compliance with the ROD (DOE 2009b). The purpose of the SMP is to:

- Prevent unacceptable exposure to contaminated soil and potentially contaminated trees and shrubs.
- Prevent the improper disposal of these materials.

1.4 Organization

This SMP contains:

- Background information about the DOE areas of the LEHR Federal Facility.
- The roles and responsibilities of DOE, UC Davis, and the regulatory agencies in implementing this SMP.
- Information on the nature and extent of soil contaminants at the DOE areas at LEHR.
- Requirements for the management of contaminated soils, trees, and shrubs that might be disturbed during construction, maintenance, or other activities.
- Requirements for emergency work or responses to natural events that might disturb contaminated soil, trees, and shrubs.
- Inspection requirements.
- Recordkeeping and reporting requirements.

1.5 Applicability

This SMP applies to soil-disturbing activities and tree and shrub disposal performed at the DOE areas at LEHR identified in Figure 3 as subject to the SMP. Soil-disturbing activities include excavation, grading, trenching, utility installation or repair, and any other human activities that could potentially bring contaminated soil to the surface. The plan applies to such work regardless of the entity performing the work.

1.5.1 Excluded Activities

This plan does not apply to DOE areas that require no action or no further action (see Section 1.1.1).

The plan does not apply to landscaping, weed abatement, fire protection, or maintenance work that meets all of the following conditions:

- Work is conducted at depths less than 1 foot below ground surface (bgs).
- Less than 5 cubic yards of soil waste is significantly displaced (e.g., stockpiled, placed in containers).
- All soil is returned to the disturbed area.

Such work may proceed without restriction.

1.6 Duration

This SMP shall remain in effect until the concentrations of contaminants in the soil are at levels that allow unrestricted use. The regulatory agencies must approve termination of the SMP.

1.7 Revisions

This SMP shall be updated during the FYR or sooner, if needed. The regulatory agencies must approve all revisions to the SMP.

2.0 Roles and Responsibilities

Implementing this SMP is the responsibility of DOE. DOE has agreed with the Regents of the University of California (UC Regents) that the Environmental Health and Safety (EH&S) Unit at the UC Davis campus (see Section 2.2.2.1) will implement the requirements of this plan, with DOE retaining ultimate accountability for compliance with the ROD requirements that this SMP executes.

2.1 U.S. Department of Energy

DOE is responsible for ensuring that activities at LEHR comply with the requirements of the ROD. DOE has entered into a memorandum of agreement (MOA) with the UC Regents (DOE 2009a), whereby the UC Regents will perform the long-term surveillance and maintenance (LTS&M) of the remedies selected under CERCLA for the DOE areas. DOE is responsible for providing sufficient funding to ensure that the UC Regents can effectively fulfill the LTS&M requirements stipulated in the ROD.

2.1.1 DOE Office of Legacy Management

The Office of Legacy Management (LM) ensures that DOE's long-term cleanup obligations are met. LM identifies actions and plans, such as this SMP, that are necessary to maintain the protection of a remedy. These actions are documented in the *Site Management and Long-Term Surveillance and Maintenance Plan for the U.S. Department of Energy Laboratory for Energy-Related Health Research Federal Facility* (DOE 2005), also called the LTS&M Plan, which states how the requirements of the ROD and remedial implementation work plans and FYR findings shall be met. The LEHR LTS&M Plan defines the requirements for managing and containing soil at the site.

As part of the implementation of the LTS&M Plan, LM is responsible for annually reporting to the California Department of Toxic Substances Control (DTSC) and all other signatories to the ROD the status of land-use controls and for conducting FYRs as required by the ROD.

2.2 University of California

2.2.1 UC Regents

The UC Regents have entered into an MOA (DOE 2009a), whereby UC Regents are responsible for:

- Recording the land-use covenant with DTSC (Appendix A).
- Developing and maintaining internal policies and procedures to ensure that land-use restrictions are maintained.
- Visiting sites to ensure that land-use restrictions are maintained.
- Developing and providing annual training for campus stakeholders affected by the restrictions.

2.2.2 UC Davis Finance, Operations and Administration Division

The UC Davis Finance, Operations and Administration (FOA) Division provides the following services on the UC Davis campus: financial, human resources, campus planning, construction management, facilities, and safety.

2.2.2.1 EH&S Unit

The EH&S Unit, part of the Safety Services department in the FOA Division, reviews and approves projects conducted by the Design and Construction Management Unit, Facilities Management Unit, Campus Planning and Environmental Stewardship Unit, and other units. The review by EH&S focuses on compliance with safety regulations.

For the purpose of this SMP, the EH&S Unit is responsible for communicating to other units performing or contracting work the nature and scope of institutional controls applicable to the DOE areas at the LEHR site and for ensuring that the institutional controls are implemented. The EH&S Unit is also responsible for communicating this information as needed to entities that might perform unplanned or emergency work in the DOE areas, including the Fire Department, Police Department, Facilities Management Unit, and designated emergency response staff at nearby campus facilities, including the Center for Health and the Environment, the Center for Equine Health, and the California Raptor Center.

The EH&S Unit shall maintain and make available to interested parties copies of this SMP and the RD/RAWP. The EH&S Unit shall develop and maintain internal policies and procedures to ensure that:

- This SMP and other land-use restrictions are implemented.
- DOE areas are visited to verify that all land-use restrictions are maintained.
- Campus stakeholders potentially affected by the restrictions receive annual training.

Once a year, the EH&S Unit shall determine which campus stakeholders from the units and facilities listed earlier may be affected by the restrictions and therefore should receive training. The EH&S Unit shall determine the training contents and may tailor the training depending on whether the entities involved may be conducting planned work following the steps outlined in Section 4.0 or only emergency work as needed following the steps in Section 5.0.

The EH&S Unit shall review and, upon concurrence from a qualified environmental professional (see Section 2.3), approve all requests for subsurface disturbance at the LEHR site and ensure that the appropriate controls are in place before and during soil-disturbing activities. The EH&S Unit shall maintain records of all activities conducted in the DOE areas and shall provide DOE with these records upon request or as required by this SMP, the RD/RAWP, the ROD, or the MOA between DOE and the UC Regents.

2.2.2.2 Entity Performing Work

The entity that performs work in any DOE area subject to this SMP is responsible for submitting a permit application to the EH&S Unit, a successor unit or organization, or a unit to which EH&S has delegated its responsibilities under the MOA and this SMP for review and approval before any soil-disturbing activities begin. The entity must also develop all required plans and

procedures and secure appropriate regulatory permits. The entity performing work must conduct all work in conformance with the requirements of this SMP and any requirements imposed by the EH&S Unit or regulatory agencies and provide the EH&S Unit with documentation required by this SMP, the soil disturbance permit application (Appendix E), and regulatory drivers.

2.3 Environmental Professional

An environmental professional will oversee all soil disturbance activities in the DOE areas subject to this SMP. The environmental professional must be qualified by education, training, or experience—or some combination of these qualifications—to review proposed work in areas subject to this SMP for potential risks; risk controls; waste disposal requirements; and compliance with all applicable laws, regulations, and industry standards. For any work proposed for the DOE areas subject to this SMP, the environmental professional shall be responsible for reviewing permits, plans, and documents; advising the EH&S Unit or DOE on the appropriate methods or controls for the work; and overseeing the implementation of all controls required for the work. An environmental professional may be an employee of the University of California or a subcontractor to the University of California or DOE.

This page intentionally left blank

3.0 Areas and Contaminants Subject to Soil Management Requirements

This SMP applies to areas where potential contaminants remain in soil (Figure 3).

As discussed in Section 1.1.1, DOE removed all waste from the DOE areas at LEHR. Small quantities of several contaminants remain in the soil. Appendix B lists constituents that may be present in site soils from 0 to 10 feet bgs. Appendix C provides the figures of the soil sample locations, and Appendix D provides the analytical data for these samples. All contaminants present in soil above background concentrations should be considered when soil is evaluated for onsite reuse or offsite disposal.

Site risks from the residual contamination in soil were quantified and characterized in the sitewide risk assessments (UC Davis 2004; UC Davis 2006; Weiss 2005) that addressed human health, ecological receptors, and groundwater resources. These risk assessments were reviewed, and risks were reassessed as part of the first FYR (DOE 2016). The risk assessments showed that contaminants can remain in the soil in DOE areas at concentrations above site background without posing a significant risk, depending on the contaminant's toxicity, mobility, and relative background concentration.

EPA requires that contaminants that may pose an estimated excess cancer risk greater than 1 in 1 million be evaluated further and, possibly, cleaned up Risk assessments showed that most of the contaminants remaining in soil did not reach this standard. Risk to the hypothetical onsite resident was below this threshold at the DSS 3, Dry Wells A–E, and Ra/Sr Treatment Systems areas. Risk assessments also indicated that the potential risk to onsite construction workers was less than 1 in 1 million at the DSS 3, Dry Wells A–E, Ra/Sr Treatment Systems, SWT, and EDPs areas.

Risk calculations were based on conservative assumptions. Risk to a hypothetical onsite resident was based on exposure to soil through direct dermal contact, ingestion, inhalation of soil particulates, ingestion of homegrown produce, and external radiation from radionuclides in soil. The exposure duration for residents was assumed to extend over 30 years, including 6 years as a child and 24 years as an adult, and to occur 350 days per year. Risk to a construction worker was based on exposure to soil through direct dermal contact, ingestion, inhalation of soil particulates, and external radiation. The construction worker was assumed to have 250 days of exposure over 1 year.

The human health risk to a hypothetical onsite resident estimated in the risk assessments for DOE areas (Weiss 2005; DOE 2016) was above 1 in 1 million for some contaminants at the DSS 4, EDPs, and SWT areas. In the original risk assessment (Weiss 2005), the highest risk to the hypothetical onsite resident was 4 in 10,000 from benzo(*k*)fluoranthene at DSS 4, primarily due to ingesting homegrown produce (Weiss 2005). This risk was estimated at 6 in 1 million when reevaluated as part of the FYR, and the highest risk to the hypothetical onsite resident was 9 in 100,000 from benzo(*a*)pyrene at DSS 4, primarily due to soil ingestion (DOE 2016). The ingestion of strontium-90 in homegrown produce also poses slight risks at the SWT area (3 in 1 million) and EDPs area (1 in 1 million) (Weiss 2005; DOE 2016). Onsite construction workers were estimated to have a 1 in 1 million risk from benzo(*a*)pyrene in subsurface soil at

DSS 4 in the original risk assessment (Weiss 2005); the risk was estimated at 2 in 1 million when reevaluated as part of the FYR (DOE 2016).

In Table 1, constituents of concern, due to potential human health risks, are noted with an "HH." Risk managers decided to address potential risks associated with these constituents through land-use restrictions, including this SMP. Human health risks did not necessitate implementation of cleanup technology.

The risk assessments indicated that residual contamination in DOE areas presents no significant risks to ecological receptors; consequently, no ecological risk management actions are being taken at the DOE areas. Some contaminants at the DSS 3 and 4, Dry Wells A–E, Ra/Sr Treatment Systems, and SWT areas were found to pose potential risk to groundwater if they were to migrate from site soils to groundwater. DOE is required to monitor groundwater at the site for these constituents (noted with a "GW" in Table 1) and evaluate the need for remedial action should these contaminants impact groundwater beneath the site. The wells that will be used for this groundwater monitoring are shown in Figure 3.

Table 1. Constituents Detected at DOE Areas at Concentrations Above Site Background

Area	Above-Background Constituent	Statistical Basis[a]

Notes:

[a] Background test results for inorganic constituents in soil from 0 to 10 feet below ground surface. The organic constituent background level is 0. Organic constituents are assumed to exceed background if the frequency of detection is 5% or more. Inorganic constituent statistical test results and the organic constituent frequency of detection are taken from the *Revised LEHR/SCDS Site-Wide Risk Assessment, Volume I: Human Health Risk Assessment* (UC Davis 2004).

[b] Common laboratory contaminant.

Abbreviations:

DDD = dichlorodiphenyldichloroethane
DDE = dichlorodiphenyldichloroethylene
DDT = dichlorodiphenyltrichloroethane
GW = constituent of concern with potential to impact groundwater quality (DOE 2009b)
HH = human health constituent of concern (DOE 2009b)
Mann-Whitney (WRS test) = constituent is above background based on results of Mann-Whitney statistical test (also known as Wilcoxon rank sum test)
Max > UTL = maximum detected concentration is above the background upper tolerance limit (80% lower confidence limit on the 95th percentile)
WRS = Wilcoxon rank sum

4.0 Soil and Vegetation Management During Planned Activities

Soil with residual contamination may be encountered during maintenance, excavation, trenching, and other soil-disturbing activities at DOE areas at LEHR. Trees or shrubs within the areas subject to this SMP may also need to be removed for a variety of reasons. All personnel, whether UC staff or contractors, conducting excavation, digging, other soil-disturbing operations, or tree and shrub removal must be made aware that there is a potential for encountering contamination and must know the procedures for dealing with contamination. All soil-disturbing and tree and shrub removal activities at DOE areas subject to this SMP (except emergency activities) shall be conducted under the oversight of an environmental professional and shall follow the process illustrated in Figure 4 and described below. Section 5.0 discusses emergency work. Tree and shrub removal also includes any partial removal resulting from pruning or fallen branches. Separate from the SMP requirements, any activities that result in the removal of valley elderberry branches exceeding 1 inch in diameter may be conducted only after consultation with, and approval from, the U.S. Fish and Wildlife Service (USFWS 2017).

4.1 Preexcavation and Preconstruction Activities

4.1.1 Permit for Soil-Disturbing and Tree and Shrub Removal Activities

Before any soil-disturbing or tree and shrub removal activities are conducted at the DOE areas, the UC Davis EH&S Unit shall be notified of the nature and location of the work to be performed. A permit application (Appendix E)—detailing the nature of the project; the project's location; and the expected depth of any proposed trenching, excavation, drilling, other soil disturbance, or tree and shrub removal—shall be submitted to the EH&S Unit. No work may begin until the EH&S Unit approves the permit for the proposed project.

The EH&S staff will review the proposed work locations to determine whether the work may occur in areas subject to this SMP. In conducting this review, survey maps for the DOE areas subject to land-use restrictions shall be used. If the proposed work may be conducted in areas subject to the SMP, the EH&S Unit will ensure that the UC Davis unit or contractor performing the work is aware of all of the requirements of this SMP and will work with the unit to ensure compliance. The EH&S Unit and the environmental professional will also assist the entity performing the work in determining whether any preactivity soil or tree and shrub sampling is required based on the intended disposition of the removed material, available contaminant data, offsite disposal facility acceptance requirements, and other factors. As outlined in the permit application (Appendix E), soil disturbed at 0–10 feet bgs and trees and shrubs will be sampled for constituents in Table 1 as appropriate based on location. Soil disturbed at >10 feet bgs will be sampled for constituents determined by professional judgment to be potentially present in the soil in concentrations above site background, based on the data presented in Appendix D.

4.1.2 Project Evaluation and Site Inspection

An evaluation of the proposed project will be conducted by the EH&S Unit and an environmental professional and will consist of a review of all available data, including survey maps and contaminant distribution data provided in this SMP (Section 3.0; Appendix B; Appendix C) to determine the appropriate requirements regarding health and safety, storm water, and waste disposal. Because some of the residual contaminants are potentially subject to migration and degradation or decay, additional data and estimates of environmental fate and

Figure 4. Process for Conducting Nonemergency Work at the DOE Areas of the LEHR Site

transport of residual contaminants will be considered by the EH&S Unit and environmental professional in soil management planning. Information regarding residual contamination distribution and fate and transport is included in the *Risk Characterization Report* (Weiss 2005), which may be obtained from the EH&S Unit, LM, or EPA.

Before any soil-disturbing activities are conducted at the DOE areas subject to this SMP, the EH&S Unit will—with the UC Davis unit or contractor performing the proposed work—inspect the site to physically identify areas of the proposed work that will be subject to the requirements of this SMP. If it is possible to move the proposed work to an area that is not subject to this SMP, or to an area with more limited residual contamination, the EH&S Unit will recommend such a move to avoid disturbing contaminated soils.

4.1.3 Control of Work Area

Before any soil-disturbing or tree and shrub removal activities are conducted at the DOE areas subject to this SMP, the UC Davis unit or contractor performing the work shall secure the work area to limit access to employees who are authorized and trained to work there.

4.1.4 Training

All staff who will conduct soil-disturbing or tree and shrub removal activities at the DOE areas subject to this SMP must receive appropriate training regarding the contaminants that might be present, the associated health hazards and hazard controls, soil-handling and waste-management requirements, and emergency procedures. As required by law and depending on their assignment, site workers shall be trained in hazardous waste operations and emergency response in accordance with the current requirements of Title 29 *Code of Federal Regulations* Section 1910.120 (29 CFR 1910.120) and Title 8 *California Code of Regulations* Section 5192 (8 CCR 5192). Specific training requirements shall be included in work plans and health and safety plans discussed below.

UC Davis implements an Environmental Protection Program as described in Section 35, "Environmental Protection," of Chapter 290 of the UC Davis *Policy and Procedure Manual*.[2] Subsection III. J. of Section 35 specifically addresses environmental program activities at LEHR. Reference to the SMP scope and requirements, including the staff training, will be incorporated in this subsection when it is next revised.

4.1.5 Required Plans and Documentation

Before soil-disturbing or tree and shrub removal activities are conducted, a work plan that covers the following topics shall be developed and approved:

- Health and safety
- Soil and vegetation moving and storage procedures, including equipment to be used
- Soil and vegetation sampling and analysis
- Waste management

[2] The Policy and Procedure Manual can be viewed at https://manuals.ucdavis.edu/policy-and-procedure-manual.

The work plan should be tailored to the scope of the activity to be performed. Appropriate permits shall be obtained for the work to be performed.

All plans for soil-disturbing and tree and shrub removal activities must be reviewed by an environmental professional and approved by the EH&S Unit.

4.1.5.1 Health and Safety

The health and safety element of the work plan should address potential exposure to site contaminants and provide requirements to control such exposure, including appropriate engineering and administrative controls and personal protective equipment.

4.1.5.2 Sampling and Analysis

The sampling and analysis element should be developed to ensure that samples are collected in conformance with EPA data-quality requirements and meet the needs of the waste disposal facility in the case of offsite disposal.

4.1.5.3 Waste Management

The waste management element should include procedures for segregating, characterizing, handling, storing, treating (if anticipated), and disposing of waste. Requirements for the proper disposal of investigation-derived waste and decontamination waste shall be included. The cost of disposing of low-level radioactive waste containing chemical contaminants can be significantly higher than the cost of disposing waste with added radiological constituents or waste containing only chemical contamination or no contamination. Waste with added radiological constituents should be segregated from waste containing only chemical contamination or no contamination. Waste determined to be hazardous shall be transported by a licensed hauler to a permitted hazardous waste disposal facility. Waste determined to be radioactive waste or mixed radioactive waste shall be transported to a disposal facility permitted to accept radioactive or mixed waste.

4.1.6 Excavation and Construction Activities

Excavation and construction shall be performed in a manner that minimizes worker exposure and protects the environment from site contaminants. A designated work area boundary shall be established for excavation and construction.

4.1.7 Waste Segregation

Waste areas shall be secured and posted. Soil from the top 1 foot bgs shall be segregated and returned to backfill the top of the excavation if soils will not be sampled. Waste with added radiological constituents should be segregated from waste containing only chemical contamination or no contamination. To facilitate preliminary waste segregation decisions in DOE soil management areas, Appendixes B and C provide the existing soil analytical data. The data should be used to evaluate the types of contaminants that might be present and to plan excavation, soil and vegetation handling, stockpiling, and disposal activities. The evaluation and segregation approaches should be conducted or reviewed by the environmental professional.

4.1.8 Unexpected Conditions

Excavation, digging, or other soil-disturbing activities should immediately cease upon the discovery of potentially contaminated soil or other material in an area not previously identified as containing residual contaminants or contaminated features (e.g., underground sumps, underground tanks, underground drain lines suspected of containing contamination, laboratory waste). Evidence of potentially contaminated soil or other material includes the following:

- Discolored soil
- Odors
- Readings on monitoring equipment (e.g., photoionization detector) indicating potential presence of contaminants
- Laboratory glassware, chemical vials, bottles, or other containers
- Drums or carboys
- Other laboratory equipment
- Animal wastes or bones
- Pipes or other debris that appears to be part of an underground waste management system, such as a sump, underground tank, leach field, and so on

The EH&S Unit must be immediately notified of the discovery.

If an excavation, digging, or other soil-disturbing activity results in an encounter with unexpected contamination identified as a CERCLA hazardous substance, notice will be promptly provided to DOE, EPA Region 9, DTSC, the California Regional Water Quality Control Board, and the California Department of Public Health so a determination can be made regarding the need for a CERCLA response or further investigation.

4.1.9 Soil Stockpile Management

Soil stockpiles, if used, shall be placed on top of heavy-duty plastic sheeting. Wherever possible, excavated soil will be stockpiled on areas with improved asphalt or concrete surface. Potentially hazardous or radioactive waste will be stored in a designated area. Unauthorized access to such areas will be prevented by fencing or other means. Soil stockpiles shall be covered with material adequate to prevent soil transport by wind or rainwater runoff; covers shall be maintained in good condition. When not covered, soil stockpile surfaces will be kept visibly moist by water spray, as necessary.

4.1.10 Dust Control

Dust-control measures shall be implemented in compliance with all applicable laws and regulations. During excavation, all exposed soil surfaces shall be kept visibly moist by water spray or covered with continuous heavy-duty plastic sheeting or other covering to minimize emissions of particulates into the atmosphere. Wind speed will be monitored during excavation activities using an anemometer positioned in an open area within 200 feet of the excavation. Excavation activities shall be suspended when winds (instantaneous gusts) exceed 25 miles per hour.

Parking areas, staging areas, and traffic pathways on the site shall be cleaned as necessary to control dust emissions. Adjacent public streets shall also be cleaned if necessary when soil material from the site is visible. Soil loaded into transport vehicles for offsite disposal shall be covered with tarps or other covering to minimize emissions into the atmosphere; the covering shall be in good condition, joined at the seams, and securely anchored.

Real-time dust monitoring shall be performed at a minimum safe distance downwind of the activity. The monitoring will be conducted to ensure that dust levels are maintained below applicable standards, such as those of the Yolo Solano Air Quality Management District.

4.1.11 Surface Water Protection

Excavated soil shall be managed in a way that will not cause sediment to enter storm water runoff. Excavated soil that is suspected or known to be contaminated shall be placed in sealed containers or stockpiled and covered. The best management practices listed below shall be applied to any excavation or construction work in the DOE areas subject to this SMP. Other best management practices may be necessary depending on the nature and location of the proposed project—as determined by the EH&S Unit, the environmental professional, or both. Best management practices include:

- Designating a completely contained area away from storm drains for refueling or maintenance work that must be performed at the site.
- Cleaning up all spills and leaks using dry methods (e.g., absorbent materials, rags).
- Dry-sweeping dirt from paved surfaces, for general cleanup.
- Protecting storm drains, using earth dikes, straw bales, sandbags, absorbent socks, or other controls to divert or trap and filter runoff.
- Shoveling or vacuuming saw-cut slurry and removing it from the site.
- Not allowing rainfall or runoff to contact contaminated soil or debris.
- Scheduling excavation work for dry-weather periods, when possible.
- Avoiding overapplication by water trucks for dust control.
- Protecting the area from rainfall and preventing runoff by using heavy-duty plastic and temporary roofs and berms.

4.1.12 Construction and Excavation Equipment Decontamination

Decontamination procedures protect workers from contaminants that may have accumulated on tools and other equipment. Proper decontamination also prevents the transport of potentially harmful materials to uncontaminated areas.

Construction, excavation, and tree and shrub removal equipment that was potentially in contact with contaminated material shall be decontaminated at a designated location (i.e., a decontamination zone). The chosen location should be readily accessible and downwind and downgradient of work areas. Gross decontamination should be performed either using a brush to loosen dirt and then a pressure washer or by other suitable means. Cleaning and decontamination

water shall be captured and placed in containers to prevent runoff from leaving the immediate worksite.

All wastewater generated from decontamination activities shall be sampled and disposed of in accordance with local, state, or federal requirements. Wastewater shall be discharged to the sanitary sewer in accordance with the requirements of the UC Davis Wastewater Treatment Plant. Discharges of pollutants into the storm drain system, state waters, or the environment are prohibited unless a permit is in place to allow such discharges.

4.1.13 Worker Safety

Safety measures shall be implemented in accordance with the health and safety element of the work plan or a site health and safety plan.

To reduce the potential of personnel falling into excavations, open excavations will be demarcated with barricades and caution tape during periods of inactivity and at the end of each workday. The excavations will be maintained to mitigate physical hazards to personnel working in or entering the area after work is completed.

4.2 Imported Soil Backfill

Soil for backfill may be imported from either onsite or offsite sources if soil shortages occur. Imported backfill must be sampled to ensure that contamination is not inadvertently brought onto the site. The project requestor must submit a Sampling and Analysis Plan (SAP) to the EH&S Unit for approval prior to importing any material. The sampling protocol shall comply with requirements of the DTSC *Information Advisory – Clean Imported Fill Material* (DTSC 2001). For volatile organic compounds only, an individual sample will be collected according to SW846 Method 5035 (EPA 2015) from each composite point, and each will be analyzed separately. At a minimum, all samples will be analyzed for the following parameters:[3]

- Soil moisture by ASTM D2216-19 (ASTM 2019) or equivalent
- Metals (CAM 17) by SW846 Method 6020
- Mercury by SW846 Method 7470
- Volatile organic compounds by SW846 Method 8260
- Semivolatile organic compounds by SW846 Method 8270
- Pesticides by SW846 Method 8081
- Polychlorinated biphenyls by SW846 Method 8082
- Total petroleum hydrocarbons by SW846 Methods 8015M/8020
- Nitrate by Method 300.0 (EPA 1993)
- Hexavalent chromium by SW846 Method 7196A

[3] The current version of the method posted in EPA's updated publication SW846 at the time of sampling will be used. All analytic results for imported backfill should be reported based on dry weight with percent moisture reported so results can be converted to wet weight basis when required.

- Gross alpha and beta radioactivity by modified EPA Method 9310 (EPA 2007)
- Gamma-emitting isotopes by Environmental Measurements Laboratory HASL-300 (EML HASL 300) Method 4.5.2.3 (DHS 1997)

The SAP will name the analytical laboratory or laboratories that will conduct the analyses and provide the Quality Assurance Plan, standard operating procedures (SOPs) for the specified analyses, and tables showing reporting limits and method detection limits (MDLs) for all analytes. The analytical methods specified in Table 2 shall be used unless technical justification to use an alternative method is provided in the SAP. To the extent practical, reporting limits should meet the detection levels shown in Table 2. All MDLs must meet these detection levels.

The analytical data, including that for radiological constituents, will be reviewed by the environmental professional to determine whether the import soil is acceptable for use as backfill. The EH&S Unit shall approve the use of imported fill before soil is imported from either onsite or offsite sources.

Table 2. Laboratory Analytes, Containers, Analytical Methods and Procedures, Detection Limits, and Holding Times for Soil/Vegetation/Solid Waste Samples

Analyte (Container)	Analytical Method	DOE/DOD ELAP-Certified Procedure[b]	Required Detection Limit (pCi/g for radionuclides; mg/kg for metals/general chemistry)	Holding Time	DOE Area

Table 2. Laboratory Analytes, Containers, Analytical Methods and Procedures, Detection Limits, and Holding Times for Soil/Vegetation/ Solid Waste Samples (continued)

Notes:

Analytical laboratories and methods must be accredited by California or DOE/DOD ELAP. If soil or vegetation waste will be disposed of outside of California, the laboratory must also be accredited in the state of the disposal facility or as otherwise specified in the receiving facility's waste acceptance criteria.

[a] Radiological analytical methods and their associated SOPs were updated in August 2022 to reflect the current analytical methods certified by DOE/DOD ELAP for GEL Laboratories, LLC. California ELAP does not provide accreditation coverage for most of the radiological methods required to implement this SMP.

[b] GEL Laboratories' DOE/DOD ELAP certifications reference laboratory-specific standard operating procedures for radiological analyses. Other contract laboratories performing radiological analyses must be accredited by DOE/DOD ELAP to perform the requested analyses.

5.0 Soil Management During Emergency Work

Emergency excavation, soil-disturbing, or tree removal activities that are required to protect human health, the environment, or property (e.g., a broken gas line, fallen tree) may be performed in the DOE areas as required. Residual contaminants at the DOE areas do not pose a short-term threat to human health or the environment. The process illustrated in Figure 5 shall be followed for emergency work. Separate from the SMP requirements, any activities that result in the removal of valley elderberry branches exceeding 1 inch in diameter may be conducted only after consultation with, and approval from, the U.S. Fish and Wildlife Service (USFWS 2017).

When practicable, the entity conducting emergency activities (see Section 2.0) shall notify the EH&S Unit of the work. The EH&S Unit will provide guidance and may monitor the emergency excavation, soil-disturbing, or tree removal activities. Excavated soils must be placed in containers or stockpiled—or both—at the worksite on an impervious surface (e.g., tarps, heavy-plastic sheeting), must have proper storm water controls, and must be protected from wind erosion and inclement weather until they can be evaluated for proper disposal. If immediate backfilling is necessary as part of the emergency response, soils excavated during emergency activities may be returned to the excavation; otherwise, soil excavated during the emergency will be evaluated as excavated waste according to the procedures in Section 6.0 and Figure 6 after the emergency response is concluded. If the excavated soil (stockpiled, containerized, or returned to the excavation) is determined unacceptable for reuse, it will be removed and properly disposed of. Soil excavation areas and holes from tree removal will be replaced with site or imported backfill that has been tested and approved as acceptable as specified in Section 4.2.

When emergency excavation, soil-disturbing, or tree removal activities occur, the extent of the emergency work shall be documented, including the date the work was performed, who performed the work, the nature of the work, the volumes of soil disturbed, the nature and extent of any contamination discovered, the final disposal of any wastes, and the resolution of the emergency. The documentation shall be submitted to the EH&S Unit within 30 days of the event. Waste that was generated during any emergency and that disturbs potential contaminated soils in the DOE areas subject to this SMP must be managed in accordance with the requirements of Section 6.0.

Figure 5. Process for Conducting Emergency Work at the DOE Areas of the LEHR Site

[1] Professional judgment shall be utilized in determining the analytical constituents. Background values listed in Table 4 and information in Appendixes B and C may be used to aid in this determination.

[2] If suitable background vegetation is available, it may be sampled and analyzed for constituents of concern for comparison with the vegetation to be disposed of. Soil background levels may also be used for the comparison (Section 6.2).

Figure 6. Decision Process for Disposal of Removed Soil and Vegetation

This page intentionally left blank

6.0 Characterization and Disposal of Wastes

This section provides requirements and a process for managing the disposal of waste soils (clean or contaminated) generated during maintenance, construction, excavation, and similar activities and the disposal of removed trees and shrubs, and it provides a process for determining how these wastes shall be disposed of. Waste designation criteria and sampling and analysis specifications are included to ensure that a method consistent with the LEHR ROD is used in making decisions.

6.1 Waste Designation Categories

Waste soil may be categorized as follows:

- **Clean:** Waste that contains constituents at or below site background concentrations.
- **Nonhazardous:** Waste with no added radioactivity and detectable levels of hazardous substances that are above background but below applicable federal and California hazardous waste standards.
- **Hazardous:** Waste with levels of hazardous substances above applicable federal and California hazardous waste standards.
- **Radioactive:** Waste with activities of radionuclides above site background levels.

Waste must be disposed of according to its categorization.

6.2 Waste Characterization

Figure 6 summarizes the waste management process. All soil excavated or tree and shrubs removed from DOE areas subject to soil management requirements (Figure 3) must be characterized to determine if the waste is clean, nonhazardous, hazardous, or radioactive (see Section 6.1). Samples of excavated soil and removed vegetation must be analyzed for waste characterization purposes. Sufficient data must be collected to meet the waste acceptance criteria of a disposal facility if the material will not be reused onsite.

6.2.1 Sample Collection

Before samples are collected, the project requestor must submit to the EH&S Unit a project-specific SAP (an element of the work plan). The EH&S Unit will review the SAP and determine its adequacy.

Depending on the type of work to be conducted, the SAP shall specify whether samples will be collected during waste generation or stockpile generation and specify sample-collection techniques. For soil, the plan shall state that a minimum of one sample per 50 cubic yards be collected. For vegetation, the plan shall provide a sampling strategy to provide data representative of the material to be disposed of. Sample densities must also fulfill disposal facility waste acceptance requirements if the soil or vegetation is not to be reused onsite. The plan shall specify procedures for decontaminating sampling equipment prior to sampling and between sampling locations and shall also include a requirement for collecting duplicate samples for quality control purposes at a rate of at least 10%.

To ensure sample integrity, samples shall be handled using complete chain-of-custody documentation and preserved using proper sample preservation techniques, holding times, and shipment methods. All samples should be identified by unique sample ID numbers. Samples should be properly labeled and packaged for shipment along with appropriate documentation. Table 2 lists recommended container types and holding times. Specific sample volumes should be based on data quality objectives developed in the SAP.

6.2.2 Sample Analysis

Samples shall be analyzed in accordance with the SAP that has been reviewed and accepted by an environmental professional and approved by the EH&S Unit. The analytical suite shall be chosen using sound professional judgment and reflect the project's needs for data, taking into account the potential contamination present at the project location. All results shall be reported on a dry-weight basis, and moisture content shall also be reported. Results can be corrected to a wet-weight basis for comparison to waste disposal criteria and California hazardous waste thresholds. The data provided in this SMP are a resource to aid in the determination of a defensible analytical strategy.

For the characterization of trees, shrubs, and soil generated during work conducted in the 0–10 foot bgs soil horizon, constituents historically detected in concentrations above background (see Table 1) should be considered in selecting the analytical suite. The list in Table 1 includes inorganic constituents with statistical test results indicating concentrations above site background and organic constituents with a detection frequency of 5% or more. The list is based on data from soil samples collected between 0 and 10 feet bgs (UC Davis 2004).

Appendix B provides more detailed information about constituents detected in soil in the 0–10 foot bgs soil horizon. The data in Appendix B represents postremoval-action conditions; however, it may not reflect current conditions for constituents that are subject to degradation, chemical transformation, or transport.

Additional constituents, including constituents of concern identified in the ROD as having a potential impact to human health or groundwater quality, may be present in concentrations above site background in soil below 10 feet. As illustrated in Figure 6, soil excavated at depths below 10 feet bgs can be either shipped offsite for disposal or evaluated for onsite reuse. A depth-specific evaluation of existing data may be conducted to determine which constituents should be analyzed in excavated soils. Appendix D provides existing analytical data for soil samples collected at the DOE areas subject to this SMP and data for soil samples collected at background locations. The data in Appendix D contains analytical results for all samples collected between the ground surface and the deepest depth explored. The data in Appendix D represent postremoval-action conditions; however, it may not reflect current conditions for constituents that are subject to degradation, chemical transformation, or transport.

All samples must be analyzed by a laboratory certified in California and the state where the waste is disposed. If the waste is not to be reused onsite, analyses performed must meet the requirements of the waste disposal facility.

Table 2 specifies analytical methods and required detection limits for characterization analyses. The SAP will name the analytical laboratory or laboratories that will conduct the analyses and will provide these facilities a Quality Assurance Plan, SOPs for the specified analyses, and tables

showing reporting limits and MDLs for all analytes. To the extent practical, reporting limits should meet the detection levels shown in Table 2. All MDLs must meet these detection levels.

6.2.2.1 Data Quality Assessment

All data generated for the purpose of characterizing excavated soil or trees and shrubs to be disposed of must be assessed to verify that they meet the quality requirements in Section 10.2 of the *Quality Assurance Project Plan for the U.S. Department of Energy Laboratory for Energy-Related Health Research, University of California, Davis* (DOE 2021b). A detailed approach to assess data quality shall be specified in the SAPs; however, data quality issues that will likely occur for soil sampling are discussed in this section.

First, the data must be reviewed to verify that they meet the quality objectives specified in Section 7.1 of the RD/RAWP. The data shall be valid for determining the disposition of any soil or vegetation that has been disturbed, including waste segregation, reuse, and disposal requirements. New and existing data will be used to:

- Identify waste segregation strategies.
- Develop appropriate worker health and safety controls.
- Identify materials recycling opportunities.
- Appropriately dispose of sanitary, hazardous, low-level radioactive, and low-level mixed waste generated during soil-disturbing activities.

Data quality assessment begins with validation of the sample data used in the characterization. The validation shall be performed in accordance with the procedures in SOP 21.1 (Appendix I of the RD/RAWP). Existing soil data were validated by the project chemist with the data qualifications presented in Appendix D.

As part of the validation process, precision and accuracy will be assessed through the validation of sample duplicates, calibrations, and spike samples. The parameter used to validate precision will be the relative percent difference (RPD). The RPD is used to determine whether a significant difference exists between duplicate samples, including matrix spike duplicates, laboratory control sample duplicates, and field duplicate samples. Other approaches to assessing precision involve statistical calculations or graphical representations that may be conducted after the data are validated. Acceptance limits for the RPDs of matrix spike duplicates, laboratory control sample duplicates, and field duplicates are provided in SOP 21.1.

Accuracy will be assessed through validation of spike recovery and instrument calibration. Acceptance limits for matrix spike recovery, laboratory control sample spike recovery, and calibration parameters provided in SOP 21.1 shall be used. Depending on the analysis method and analyte, a review of linearity in the calibrated range, detector response, reference standards, and continuing calibration check standards shall be performed.

Data representativeness will be achieved through the careful, informed use of existing data and the collection of representative samples to support waste management decisions. Sample locations and rationale will be addressed in the SAPs developed before soil-disturbing and vegetation removal activities are conducted (see Section 4.1.5) for nonemergency work. Representativeness will also be achieved through the proper collection and handling of samples

to avoid interferences and minimize contamination and loss (see SOPs 1.1, 2.1, and 9.1 in Appendix I of the RD/RAWP).

Comparability among measurements will be achieved through the use of standard procedures and standard field data sheets presented in the project SOPs (see Appendix I of the RD/RAWP).

The completeness goal for samples collected to support future waste management decisions is 90% unless stated otherwise in project-specific work plans. This goal is per analyte per project. If project data are rejected during data validation and the completeness goal is not met, additional samples will be collected, if necessary, to provide sufficient data. When the data are validated and complete, they will be made available to data users for comparisons, calculations, and graphical representations to support project decisions.

Most waste management decisions will rely on comparisons of sample data to background or risk-based standards, or both. A screening comparison of maximum concentrations to standards is typically conducted first, followed by the calculation of a statistically representative concentration or performance of statistical tests. If a maximum concentration is not accurate and no further statistical approach is taken, the comparison could lead to a project decision error. Part of the data validation process is to identify and assign qualifications to data that may not be accurate. The reason for the data qualification and its impact on the decision should be considered upon the use of single estimated results. If the qualification indicates a high bias or the maximum is not qualified but appears to be an outlier, the data can be tested according to an outlier test procedure (EPA 2006). Selection of the next-highest concentration may be appropriate depending on the data qualification or outlier test result. Justification for using a second-highest concentration should be provided if it becomes the basis of a project decision.

Statistical representations of the data such as the upper confidence limit (UCL) on the mean can be calculated and used for project decisions. The UCL (typically the 95% UCL) may be compared to a risk-based standard, but it should never be compared to the background upper tolerance limit (UTL). The UCL is a representation of central tendency, whereas the background UTL represents an upper percentile of the background distribution; any comparison between these parameters is biased. Before calculation of a UCL, it is important to evaluate the data distribution using goodness-of-fit tests to determine which distribution assumption is most appropriate. UCLs can be calculated according to a variety of procedures depending on the distribution assumption. It is often the case that data representing contaminated soil do not fit any distribution and are best represented by a nonparametric UCL. ProUCL or other software packages for testing goodness-of-fit and calculating the UCL for datasets with and without nondetect observations may be used (EPA 2009).

Soil data can be compared to background using statistical tests such as the Student's *t* test or Wilcoxon rank sum test. These tests would be used to compare a dataset representing onsite soil with a background distribution and determine whether the distributions are shifted relative to one another. A null hypothesis, alternative hypothesis, and decision errors must be specified in the SAP when these tests will be conducted. The hypothesis statement and decision errors for removal actions and confirmation sampling conducted previously in DOE areas were:

H_o: Reference-based cleanup standard not achieved.

H_a: Reference-based cleanup standard achieved.

Type I decision error: 10%

Type II decision error: 20%

Where H_o is the null hypothesis, H_a is the alternative hypothesis and "Reference" is the background dataset. If the Student's *t* test or other parametric statistical test is selected, goodness-of-fit needs to be tested for the onsite and background data to determine whether the parametric distribution assumption is appropriate. Contaminated soil data rarely pass goodness-of-fit tests, so nonparametric tests such as the Wilcoxon rank sum test are recommended. Nonparametric tests, however, can be insensitive to high concentrations at the upper tail of the onsite distribution (hot spots). A graphical comparison of onsite data to reference data should be included in the evaluation to identify hot spots if a nonparametric test is used.

Other data quality issues include the use of outlier data and censored data. Point-to-point comparisons, parametric estimates, and parametric distribution tests are affected by outlier data. Nonparametric estimates and tests are much less sensitive when outlier data are used. Outlier data can lead to decision error in all cases. Statistical tests are available to determine whether a suspect result qualifies as an outlier (EPA 2006).

Censored data are typically not a problem for point-to-point comparisons, but statistical parameter calculations and distribution tests can yield wrong results if data are highly censored. When results are censored, the reporting limits should be compared to the requirements specified in Table 2 and Table 3. Censored data that do not meet the reporting limit requirements may still be usable for project decisions if comparison criteria are above the elevated detection limits. ProUCL has been updated to accommodate UCL calculations using censored datasets (EPA 2009). If data with elevated reporting limits cannot be used, the reason for the reporting limit failure should be determined. Sample matrix and chemistry can cause elevated reporting limits and be impossible to control. For cases where reporting limits can be controlled, the dataset will be evaluated for completeness and the affected samples will be reanalyzed or recollected, if necessary, to meet the 90% completeness goal.

When the point-to-point data comparisons, parameter calculations, or distribution tests are performed, limitations shall be identified and their effect on the comparison or test result explained. The tolerable limits on decision errors shall be verified (see Type I and II decision errors discussed earlier). If a decision error exceeds the tolerable level, the error source shall be identified, if possible, and corrective actions, if any, determined.

Suggestions for improved data collection and statistical evaluation will be provided, as appropriate, for waste management associated with projects subject to this SMP. The project chemist will identify the source of any failure to meet data quality objective performance and acceptance criteria and initiate corrective action, if necessary, to prevent future occurrences.

Table 3. Required Detection Limits for Organic Constituents

Analyte	Required Detection Limit (µg/kg)	DOE Area
Volatile Organic Compounds		
2-Butanone	10	Ra/Sr, DSS 3, Dry Wells, SWT
Acetone	10	Ra/Sr, DSS 3, DSS 4
Ethylbenzene	10	Ra/Sr, DSS 4, Dry Wells, SWT

DDD = dichlorodiphenyldichloroethane
DDE = dichlorodiphenyldichloroethylene
DDT = dichlorodiphenyltrichloroethane
µg/kg = micrograms per kilogram

6.2.3 Excavated Waste Designation

Soil designations shall be reviewed and accepted by an environmental professional before the soil is disposed of. Sample data for soil excavated from the 0–10 foot bgs soil horizon can be compared to the site background levels provided in Table 4 to determine the soil's designation. If the concentrations are below site background, the soil can be designated as clean and reused onsite. If the contaminant concentrations in soil exceed the background levels listed in the table, an additional comparison to background data distributions, using a statistical test, may be conducted. By definition, 5% of uncontaminated soil is statistically expected to contain constituent concentrations above the background levels listed in Table 4. These background levels are estimates of the 95th percentile of the sample distribution for site soil representative of background conditions. Thus, a soil stockpile may not contain contamination even though some results are above the background levels. Statistical tests such as the Wilcoxon rank sum test (Gilbert 1987) can be used to compare excavated soil data to the background data and more accurately determine whether excavated soil is contaminated. Additional sample collection may be necessary to meet the statistical power requirement of the test. Statistical tests generally require at least five samples.

Table 4. Background Values for Metals and Radionuclides Potentially Present in Soil at DOE Areas

Constituent	Shallow[a] Background (mg/kg or pCi/g)	Subsurface[b] Background (mg/kg or pCi/g)	Combined Depths Background (mg/kg or pCi/g)

Notes:
Soil background concentrations are those established for the DOE areas at LEHR in 2000 (DOE 2000a; DOE 2000b).
[a] Shallow soil background is representative of soil in the 0–4 foot depth interval.
[b] Subsurface soil background is representative of soil deeper than 4 feet bgs and less than or equal to approximately 40 feet bgs.

Abbreviations:
mg/kg = milligrams per kilogram
pCi/g = picocuries per gram
NA = not applicable
<*n* = not detected in background; detection limit of *n*

Other approaches to designating soils as clean or contaminated may be used as long as regulatory approval is obtained for such approaches.

Contaminant concentrations in removed trees and shrubs may also be compared with the site soil background levels to determine suitability for reuse. If available, trees or shrubs of the same species, of similar size, and in similar condition to those being removed and that are in nearby areas not expected to be contaminated may also be sampled and analyzed for the identified constituents of concern to evaluate background levels. Professional judgment will be used in determining whether trees or shrubs are contaminated.

6.3 Waste Disposal

Analytical data and process knowledge shall be used to certify and designate waste as clean, nonhazardous, hazardous, or radioactive, in accordance with applicable federal and state requirements. A designation report containing the technical basis for waste classification in accordance with all applicable regulatory requirements shall be completed to document the designation decision. The report shall be reviewed and accepted by an environmental professional and submitted to the EH&S Unit for review and approval.

All offsite disposal of waste soil will be in a landfill that complies with the Off-Site Rule of Section 121(d)(3) of CERCLA (40 CFR 300.440). The landfill may require specific analytical testing to document that chemical concentrations do not exceed its waste acceptance criteria.

6.3.1 Clean Soil and Vegetation

Clean excavated soil will be reused onsite (such as for fill or other construction purposes) to the extent practicable. Clean vegetation may be chipped and used as ground cover or otherwise processed for reuse. If reuse is not practical or cost effective, clean waste will be disposed of in a qualifying landfill (see Section 6.3).

6.3.2 Nonhazardous Waste

Excavated soil and removed vegetation classified as nonhazardous will be disposed of in a Class II or other acceptable landfill, depending on the acceptance criteria of the landfill. Such soil and vegetation may not have any added radioactivity (i.e., above activities found in background soils). The landfill may require analytical testing of the waste to document that chemical concentrations do not exceed its waste acceptance criteria.

Nonhazardous soil or vegetation may also be reused onsite if a risk assessment can demonstrate that reusing the material does not pose a risk to human health, the environment, or water quality. At a minimum, the risk assessment must address human health, ecological receptors, groundwater quality, surface water, and the proposed reuse scenario (e.g., surface soil layer, subsurface soil layer covered with clean import fill). The risk assessment must be prepared by a qualified professional and evaluate risks of onsite reuse of contaminated material, taking into account the appropriate site use. A tiered approach should be applied in conducting the risk assessment, taking into account the contaminant concentrations, applicable standards, reuse scenarios, volumes to be reused, and other applicable factors. The initial tier of this assessment shall consist of a comparison of the concentrations of chemical and radiological constituents in the material to applicable risk-based standards (e.g., EPA Region 9 risk-based screening levels or equivalent). DOE, DTSC, and EPA shall approve the risk assessment before the material may be reused. The material must be reused in accordance with the risk assessment assumptions.

6.3.3 Hazardous, Radioactive, or Mixed Waste

Soil and vegetation classified as hazardous or containing added radioactivity that fails the risk assessment for reuse onsite may be treated onsite or shipped offsite for disposal at a facility permitted to accept such waste. Soil and vegetation removed from the DOE areas subject to this SMP are not expected to be mixed waste or hazardous waste.

Onsite treatment shall be conducted only with agency approval and must meet the requirements of all applicable laws. Onsite treatment may be performed to reduce waste toxicity or consolidate volume prior to disposal. If contaminated soil or vegetation is disposed of at an offsite location, it will be handled in accordance with the Resource Conservation and Recovery Act, California hazardous waste laws and regulations, and other applicable laws.

A waste profile, containing all associated analytical data and radiological survey data, must be developed for the waste to be shipped offsite for disposal. The profile shall compare waste characterization data to the disposal facility waste acceptance criteria to determine if the acceptance criteria are met.

Radioactive or mixed-waste soil and vegetation will be disposed of in facilities licensed to accept low-level radioactive and mixed wastes, respectively. DOE must approve the disposal before the material is moved offsite.

Soil and vegetation with added radioactivity may also be reused onsite if a risk assessment can demonstrate that reusing the material does not pose a risk to human health, the environment, or water quality. At a minimum, the risk assessment must address human health, ecological receptors, groundwater quality, and surface water for the proposed reuse scenario (e.g., surface soil layer, subsurface soil layer covered with clean import fill). DOE, DTSC, and EPA shall approve the risk assessment before the material may be reused. All signatories to the ROD will have an opportunity to review and comment on the risk assessment. The material must be reused in accordance with the risk assessment assumptions.

This page intentionally left blank

7.0 Inspections

As frequently as appropriate for the work being performed, the EH&S Unit shall inspect active excavation, digging, or other soil-disturbing activities authorized by the EH&S Unit to ensure that they comply with this SMP. Stop-work orders shall be promptly issued if any noncompliance has occurred. An investigation shall be conducted to determine the cause of, and parties responsible for, any noncompliance before work activities resume.

DOE and all signatories to the ROD shall be promptly notified of the findings of the investigation if the occurrence put human health or the environment at risk.

Evidence of unauthorized soil disturbance or tree and shrub removal shall be documented and reported to DOE, DTSC, and EPA within 30 days of its identification. Corrective action, if required, shall be developed in coordination with DOE, DTSC, EPA, other signatories to the ROD, as appropriate, and the EH&S Unit.

This page intentionally left blank

8.0 Documentation

8.1 Recordkeeping

The following documentation must be maintained and submitted to the EH&S Unit for all soil-disturbing and tree and shrub removal projects:

- Work plans
- Analytical data
- Waste designation reports
- Hazardous waste manifests
- Manifest fee documents
- Bills of lading for disposal

8.2 Soil Disturbance Report

A soil disturbance report shall be submitted to the EH&S Unit at the completion of soil-disturbing activities. At a minimum, the report shall include the following:

- A description of work performed
- A map, with the project location(s) of soil disturbance, soil removal, soil reuse, or placement of imported soil
- A map of waste storage and stockpile locations
- A map of sampling locations, as appropriate
- Contaminants of concern
- EPA analytical methods
- Analytical data results, including associated laboratory quality control reports
- A risk assessment with a recommended course of action
- Waste characterization data
- Waste profiles and manifests for soil disposed of at offsite disposal facilities
- Volumes of soil reused onsite along with surveyed coordinates indicating where such soil was placed
- Analytical data for any imported soil placed onsite

8.3 Vegetation Removal Reports

Appendix F provides an inventory of trees and shrubs exceeding 6 feet in height and within, or with canopies extending over, the DOE areas subject to this SMP. This inventory includes a map of tree locations, numerical identifier for each tree, and a table listing the type, size,

and condition of each tree or shrub. As shown in this table, approximately 60 trees or shrubs are subject to this SMP:

- Larger trees, including Aleppo pine (20), Canary Island pine (13), Chinese hackberry (6), and white mulberry (1)
- Smaller trees, including almond (4), olive (3), and ash (1)
- Shrubs, including the protected valley elderberry (6) and oleander (6)

A vegetation removal report shall be submitted to the EH&S Unit after all tree and shrub removal activities are completed. The report shall include all elements of a soil disturbance report, as appropriate, and shall also include an update to the tree and shrub inventory to indicate which trees or shrubs were removed.

8.4 Annual Reports

In accordance with the requirements of the ROD and as described in the RD/RAWP, DOE shall submit a written land-use covenant report to all ROD signatories annually. Reports shall be submitted within 30 days of the anniversary date of the ROD signature date and shall include:

- Inspection results.
- A certification attesting to compliance with the terms and conditions of the land-use covenant.
- A discussion of any soil-disturbing and tree and shrub removal activities and the final disposal of any wastes generated, any violations of the land-use covenant, any action taken to ensure compliance with the land-use covenant, and the updated tree and shrub inventory.

These reports shall discuss SMP implementation and summarize the data and information described in Sections 8.1 and 8.2.

8.5 Audits

DOE shall audit the implementation of this SMP as needed but at least every 5 years. The audit shall review:

- Compliance with this SMP.
- Safety documentation.
- Soil and vegetation reuse approvals.
- Waste disposal records.
- Incidents and corrective actions.

The results of the audits shall be included in FYRs.

8.6 Five-Year Reviews

Sites that have remaining hazardous substances, pollutants, or contaminants above levels that allow for unlimited use and unrestricted exposure after remedial actions must be reviewed every

5 years to ensure protection of human health and the environment. DOE will conduct a FYR in accordance with the requirement provided in the RD/RAWP, as well as any regulations, policies, and guidance applicable at the time. Any recommended SMP modification will be addressed during these reviews.

COVENANT TO RESTRICT USE OF PROPERTY

ENVIRONMENTAL RESTRICTION

(Re: Portions of County of Solano Assessor's Parcel No. 110-05-04 UC Davis Laboratory for Energy-related Health Research / Old Campus Landfill (LEHR/OCL) Superfund Site, Site Code 100424)

This Covenant and Agreement ("Covenant") is made by and between the Regents of the University of California, a California public corporation ("University" or the "Covenantor"), the current owner of property situated at the University of California, Davis, County of Solano, State of California, depicted in the attached Exhibit "A" (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined in Health and Safety Code section 25260 in certain portions of the Property. The Covenantor and Department, collectively referred to as the "Parties," hereby agree, pursuant to Civil Code section 1471 and Health and Safety Code section 25355.5, that the use of the Property be restricted as set forth in this Covenant; and the Parties

further agree that the Covenant shall conform with the requirements of California Code of Regulations, title 22, section 67391.1. The provisions of this Covenant shall be for the benefit of, and shall be enforceable by, the United States Environmental Protection Agency ("U.S. EPA") as a third party beneficiary pursuant to general contract law, including, but not limited to, Civil Code Section 1559.

ARTICLE I
STATEMENT OF FACTS

1.01. The former Laboratory for Energy-related Health Research ("LEHR") (*see* Exhibit "A") comprises approximately 15 acres ("LEHR Site" or "Site") in the southern portion of Solano County's Assessor's Parcel No. 110-05-04 (Exhibit "B"). The Property comprises eight distinct areas described and depicted in Exhibit "C" that cover approximately 2.4 acres and lie within the boundary of the LEHR Site (see Exhibit "A"). These eight areas are known as the: 1) Radium/Strontium Treatment System Areas (including Domestic Septic System 2 Area); 2) Domestic Septic System 3 Area; 3) Domestic Septic System 4 Area; 4) Dry Wells A-E Area; 5) Eastern Dog Pens Area; 6) Southwest Trenches Area; 7) Eastern Remediation Support Area; and 8) Western Remediation Support Area. These eight areas correspond to areas 1, 2, 3, 4, 5, 6, 7 and 8 within Exhibit C, respectively, and may be referred to in this Covenant by name or exhibit.

1.02. The LEHR Site was operated by the Atomic Energy Commission (now United States Department of Energy ["DOE"]) as LEHR (referred to as the Radiobiology Laboratory prior to 1979) under a series of Occupancy Agreements with the Regents of the University of California initiated in 1958. The LEHR Site was placed on the National Priorities List by the Environmental Protection Agency on May 31, 1994, 59 Federal Register 27,989. Due to releases of hazardous materials during DOE's occupancy at the Site, DOE and U.S. EPA entered into a Federal Facility Agreement ("FFA") on October 29, 1999, with the Regional Water Quality Control Board and the California Department of Public Health (formerly the California Department of Health Services)

joining as signatories in 1999 and the Department joining in 2000. The intent of the FFA was to ensure that environmental impacts associated with past activities at the LEHR Site are thoroughly investigated, and appropriate response actions taken as necessary to protect human health, welfare, or the environment. Pursuant to the FFA, DOE selected cleanup remedies in the 2009 Record of Decision ("ROD") under the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"). The remedies selected in the ROD require that the Property be subject to land use controls to restrict certain uses, in the form of this Covenant.

1.03. The ROD details the selected remedies for the Property. The Property is restricted because of soil and groundwater contamination, discussed in detail below. For certain areas of the Property, contingent remediation may be necessary if groundwater monitoring indicates that groundwater impacts have occurred pursuant to conditions stated in the ROD. Additionally, a land-use restriction is being imposed at the area described in Exhibit C-6 and depicted on Sheet 2 in Exhibit C. In addition, two areas have been designated for use as staging areas if contingent remediation (*see* section 1.05) is required. These areas are the Eastern Remediation Support Area and Western Remediation Support Area (*see* Exhibits "C-10" and "C-11").

1.04. DOE and the Covenantor ("MOA Parties") entered into a Memorandum of Agreement for environmental restoration and decontamination on March 13, 1990 amended February 17, 1993, November 30, 1993, and again on June 18, 1997, and superseded on July 8, 2009 (referred to collectively as the "MOA"). This MOA outlines the roles and responsibilities of the MOA Parties regarding the investigation and remediation of the LEHR Site. The MOA Parties agree that the required investigation, remediation, long-term surveillance and maintenance, and contingent remediation ("IR & LTSMCR") activities at the Property shall be conducted by DOE.

1.05. Restrictions on soil disturbance apply to six of eight areas of the Property, as identified in Exhibit C-2, Exhibit C-4, Exhibit C-5, Exhibit C-7, Exhibit C-8, and Exhibit C-9. Disturbance of soil is only allowed in compliance with the Soil Management Plan

("SMP") included as an appendix to the Remedial Design/Remedial Action Work Plan dated November 2010, which documents the requirements and methods for implementing remedies selected in the ROD.

The ROD requires groundwater monitoring and this Covenant prohibits interference with the groundwater monitoring wells required for the implementation of the remedies. Groundwater monitoring will be conducted in five of the eight areas of the Property, as identified in Exhibit C-1, Exhibit C-3, Exhibit C-5, Exhibit C-7, and Exhibit C-9 to confirm groundwater protection. If groundwater monitoring indicates that groundwater impacts as defined in the ROD have occurred due to constituents of concern ("COCs") remaining in soil, DOE will evaluate remedial options and determine whether contingent remediation may be required, in accordance with the ROD.

1.06. Land use restrictions listed in section 4.01 are required for the area described in Exhibit C-6 and depicted on Sheet 2 of Exhibit C due to polycyclic aromatic hydrocarbons in the soil, described in more detail below.

1.07. Human Health Risk Assessment. As detailed in the ROD, the Property contains hazardous substances in soil that are defined in Health and Safety Code section 25316 as hazardous substances. Specific COCs that pose a human health risk, and the maximum concentrations detected, are as follows: the Southwest Trenches Area contains strontium-90 (16 picocuries/g); the Eastern Dog Pens Area contains strontium-90 (8.3 picocuries/g) and dieldrin (0.22 mg/kg); and the Domestic Septic System 4 contains benzo(a)anthracene (3.8 mg/kg), benzo(a)pyrene (2.4 mg/kg), benzo(b)fluoranthene (2.7 mg/kg), benzo(k)fluoranthene (1.5 mg/kg), dibenzo (a,h)anthracene (1.1 mg/kg), and indeno(1,2,3-cd)pyrene (1.5 mg/kg).

The human health risk assessment performed by DOE shows COCs present in soil at the Southwest Trenches and Eastern Dog Pen areas are: 1) statistically above background; and 2) present an excess cancer risk above one in one million. The residual contaminants in these areas do not pose a human health risk unless soil containing these contaminants is disturbed, in which case an unacceptable risk to human health or safety or the environment could result. Thus the SMP is required to

prevent such potential risk.

The human health risk assessment performed by DOE shows COCs present in soil at the Domestic Septic System 4 are: 1) statistically above background; and 2) present an excess cancer risk above one in one million and 3) soil exposure and plant ingestion pose a human health risk. Therefore the ROD requires this Covenant restrict the uses as described in section 4.01 and requires compliance with the SMP to prevent an unacceptable risk to human health or safety or the environment.

1.08. Groundwater Protection. As further detailed in the ROD, the Property contains additional hazardous substances in soil that are defined in Health and Safety Code section 25316 as hazardous substances. These residual contaminants present in soil on the Property are a potential risk to groundwater quality.

Specific COCs in soil that are in excess of remediation goals for protection of groundwater are listed in Table 2-8 of the ROD, and are present in the areas of the Property described in Exhibit C-1, Exhibit C-3, Exhibit C-5, Exhibit C-7, and Exhibit C-9 and depicted on survey maps in Exhibit C. These areas contain a variety of COCs that require groundwater monitoring to demonstrate COCs are not migrating to groundwater, and that groundwater protection is maintained in conformance with the groundwater quality goals. Additional COCs listed in Table 2-9 of the ROD are present in the soil in concentrations that do not presently pose a risk to human health or groundwater quality, but may impair groundwater quality in the future. Groundwater monitoring will continue until it can be shown that the COCs in soil no longer pose a threat to water quality.

The human health risk assessment performed by DOE shows that ingestion of groundwater is not the primary risk to human health. However, to protect the groundwater quality, monitoring is required with possible contingent remediation, per the ROD. Based on the human health risk assessment the Department concludes that the Property, as remediated and subject to the restrictions of this Covenant, does not present an unacceptable threat to human health or safety or the environment.

ARTICLE II
DEFINITIONS

2.01. Department. "Department" means the California Department of Toxic Substances Control and includes its successor agencies, if any.

2.02. U.S. EPA. "U.S. EPA" means the United States Environmental Protection Agency and includes its successor agencies, if any.

2.03. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, prohibitions, and terms and conditions as set forth in any section of this Covenant.

2.04. Improvements. "Improvements" includes, but is not limited to: buildings, structures, roads, driveways, improved parking areas, wells, pipelines, or other utilities.

2.05. Lease. "Lease" means lease, rental agreement, or any other document in which the lessor grants to a lessee a right to use or occupy any portion of the Property.

2.06. Occupant. "Occupant" means Owners and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.07. Owner. "Owner" means the Covenantor, and all successors in interest including heirs and assigns, who at any time hold title to all or any portion of the Property.

ARTICLE III
GENERAL PROVISIONS

3.01. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Health and Safety Code section 25355.5 and Civil Code section 1471; (b) inures to the benefit of and passes with each and every portion of the Property, (c) is for the benefit of, and is enforceable by the Department, and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding upon Owners/Occupants. Pursuant to the Health and Safety Code, this Covenant binds all owners of the Property, their heirs, successors, and assignees, and the agents, employees, and lessees of the owners, heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive owners of the Property are expressly bound hereby for the benefit of the Department.

3.03. Incorporation into Deeds and Leases. This Covenant shall be incorporated by reference in each and every deed and lease for any portion of the Property.

3.04. Conveyance of Property. The Owner shall provide written notice to the Department not later than thirty (30) days after any conveyance of any ownership interest in the Property (excluding leases, and mortgages, liens, and other non-possessory encumbrances). The written notice shall include the name and mailing address of the new owner of the Property and shall reference the site name (UC Davis Laboratory for Energy-related Health Research / Old Campus Landfill ("LEHR/OCL") Superfund Site) and site code (100424) as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number (APN) (No. 110-05-04) noted on page one. If the new owner's property has been assigned a different APN, each such

APN that covers the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect proposed conveyance, except as otherwise provided by law or by administrative order.

3.05. Costs of Administering the Covenant to be paid by Owner. The Department will incur costs associated with the administration of this Covenant. These costs must be paid by the Owner pursuant to California Code of Regulations, title 22, section 67391.1(h). One purpose of the MOA includes delineation of the responsibilities of DOE to cover costs incurred by the Owner associated with implementing and maintaining this Covenant. These costs are currently paid pursuant to the terms of the MOA. If, however, payments are not made pursuant to the MOA, the Owner will be responsible for the Department's costs under this section.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.01. Prohibited Uses. The area described in Exhibit C-6 and depicted on sheet 2 in Exhibit C shall not be used for any of the following purposes:

(a) A residence, including any mobile home or factory built housing, constructed or installed for use as residential human habitation.

(b) Growing any plants for human consumption.

(c) A day care center for children.

4.02. Soil Management. The following soil management conditions apply to the six areas of the Property described and depicted in Exhibit C-2, Exhibit C-4, Exhibit C-5, and Exhibits C-7 through C-9:

(a) No activities that will disturb soil at or below grade (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed in these areas unless abiding by the SMP approved by the U.S. EPA and the Department.

(b) Any contaminated soils brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.

4.03. Non-Interference with Groundwater Monitoring Wells.

(a) All uses shall preserve the physical accessibility to and integrity of the groundwater monitoring system.

(b) The groundwater monitoring system shall not be altered without prior written approval by the Department.

4.04. Access for Department and the U.S. EPA. The Department shall have reasonable right of entry and access to the Property for inspection, monitoring, and other activities consistent with the purposes of this Covenant as deemed necessary by the Department in order to protect the public health or safety, or the environment. Nothing in this instrument shall limit or otherwise affect U.S. EPA's right of entry and access or U.S. EPA's authority to take response actions under CERCLA; the National Contingency Plan, 40 Code of Federal Regulations Part 300 (1997) and its successor provisions; or federal law. Nothing in this instrument shall limit or otherwise effect the Department's right of entry and access, or authority to take response actions, under CERCLA; the National Contingency Plan, 40 Code of Federal Regulations Part 300 (1997) and its successor provisions; Chapter 6.8, Division 20 of the California Health and Safety Code; California Civil Code, or other applicable state law.

4.05 Access for Implementing Operation and Maintenance. The parties responsible for implementing the operation and maintenance activities shall have reasonable right of entry and access to the Property for the purpose of implementing the operation and maintenance activities until the Department determines that no further operation and maintenance is required.

4.06. Inspection and Reporting Requirements. The Owner shall conduct an

annual inspection of the Property verifying compliance with this Covenant. The annual inspection shall include a verification of permits obtained for any soil-disturbing activities, a review of soil-disturbing activities for compliance with the SMP, a review of disposal practices for waste generated during soil-disturbing activities, and suggested changes to the SMP. The Owner shall submit an annual inspection report to the Department for its approval by January 15th of each year. A copy of the annual inspection report shall also be submitted simultaneously to U.S. EPA. The annual inspection report must include the dates, times, and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations were performed that were the basis for the statements and conclusions in the annual inspection report (e.g., drive by, fly over, walk in, etc.). It shall contain the annual inspection results, review of compliance with the requirements of the SMP and certification of compliance with this Covenant, and discussion of any soil-disturbing activities and wastes generated. If violations are noted, the annual inspection report must detail the steps taken to return to compliance. If the Owner identifies any violations of this Covenant during the annual inspections or at any other time, the Owner must within ten (10) days of identifying the violation: determine the identity of the party in violation, send a letter advising the party of the violation of the Covenant, and demand that the violation ceases immediately. Additionally, copies of any correspondence related to the violation of this Covenant shall be sent to the Department and U.S. EPA within ten (10) days of its original transmission.

ARTICLE V
ENFORCEMENT

5.01. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this Covenant. Violation of this Covenant, including but not limited to, failure to submit, or the submission of any false statement, record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as

provided by law.

5.02. Enforcement Rights of U.S. EPA as a Third Party Beneficiary. U.S. EPA, as a third party beneficiary, has the right to enforce the Environmental Restrictions contained herein.

ARTICLE VI
VARIANCE, REMOVAL, AND TERM

6.01. Variance. Any person may apply to the Department for a written variance from the provisions of this Covenant. Such application shall be made in accordance with Health and Safety Code section 25223 and a copy of the application shall be submitted to U.S. EPA simultaneously with the application submitted to the Department. No variance may be granted under this paragraph without prior notice to and an opportunity to comment by U.S. EPA.

6.02 Removal. Any person may apply to the Department to remove any or all restrictions imposed by this Covenant. Such application shall be made in accordance with Health and Safety Code section 25224 and a copy of the application shall be submitted to U.S. EPA simultaneously with the application submitted to the Department. No modifications may be granted under this paragraph without prior notice to and an opportunity to comment by U.S. EPA.

6.03 Term. Unless ended in accordance with paragraph 6.02, by law, or by the Department in the exercise of its discretion, after providing notice to and an opportunity to comment by U.S. EPA, this Covenant shall continue in effect in perpetuity.

ARTICLE VII
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be

construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof to the general public or anyone else for any purpose whatsoever. Further, nothing set forth in this Covenant shall be construed to affect a taking under State or Federal law.

7.02. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of Solano within ten (10) days of the Covenantor's receipt of a fully executed original.

7.03. Notices. Whenever any person gives or serves any Notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: when delivered, if personally delivered to the person being served or to an officer of a corporate party being served, or three (3) business days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

Exhibit B

Description of Assessor's Parcel, Portions of which are Subject to Environmental Restrictions

All that certain real property situated in Solano County, California described as follows:

Solano County Assessor's Parcel Number 110-05-04 more particularly described in Quitclaim Deed recorded May 18, 1999, as Document No 1999-00042875 Official Records of said county, that includes Exhibit A comprising *Description - Hamel to UCD* and *Quitclaim Line Exhibit* prepared by Frame Surveying & Mapping,

and

shown on the attached map of parcel 110-05-04.

COVENANT DESCRIPTION – EXHIBIT C-1

RADIUM / STRONTIUM TREATMENT SYSTEMS AREA
SUBJECT TO CONTINGENT REMEDIATION

All that portion of Lot 37 Rancho Los Putos and projected Section 21, T.8N., R.2E., M.D.B. & M., County of Solano, State of California, being a portion of that certain real property described in Quitclaim Deed recorded May 18, 1999, as Document No. 1999-00042875 Official Records of said county, described as follows:

Commencing at a point in the centerline of Old Davis Road (County Road No. 79) marked by a found aluminum cap monument stamped "Solano County Surveyor", from which a found 1 1/2" brass cap in monument well, accepted as marking the intersection of Becker Road (County Road Nos. 86 and 106) and said Old Davis Road (County Road No. 79), bears S 00°22'36" W 8421.14 feet (cited in said Quitclaim Deed as S 00°23'11" W);

thence along said centerline S 00°22'36" W 2693.84 feet; thence at right angles from said centerline S 89°37'24" E 52.85 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point A***, thence N 22°43'48" W 46.75 feet; thence N 04°18'15" W 8.57 feet; thence N 00°10'20" W 34.24 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point C***, and the **True Point of Beginning**;

thence N 00°25'23" E 263.54 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point G***; thence East 20.30 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence continuing East 7.01 feet to the northwest corner of Building H-219; thence along the westerly and southerly lines of Building H-219 the following four courses: S 09°11'25" W 45.72 feet, S 80°48'35" E 2.99 feet, S 09°11'25" W 8.40 feet, and S 80°48'35" E 19.33 feet to a point, called ***Point H***; thence leaving Building H-219 South 50.67 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 16°02'47" W 45.75 feet; thence S 09°20'34" W 14.76 feet; thence S 01°59'38" E 97.40 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence West 31.00 feet to the true point of beginning.

Containing 8244.44 square feet (0.189 acres), more or less.

The foregoing description is based on the bearing between found UC Davis Control Monuments 620 to 666 as being S 81°32'47" E.

DOMESTIC SEPTIC SYSTEM 4 AREA

SUBJECT TO CONTINGENT REMEDIATION AND SOIL MANAGEMENT PLAN

All that portion of Lot 37 Rancho Los Putos and projected Section 21, T.8N., R.2E., M.D.B. & M., County of Solano, State of California, being a portion of that certain real property described in Quitclaim Deed recorded May 18, 1999, as Document No. 1999-00042875 Official Records of said county, described as follows:

Commencing at a point in the centerline of Old Davis Road (County Road No. 79) marked by a found aluminum cap monument stamped "Solano County Surveyor," from which a found 1 1/2" brass cap in monument well, accepted as marking the intersection of Becker Road (County Road Nos. 86 and 106) and said Old Davis Road (County Road No. 79), bears S 00°22'36" W 8421.14 feet (cited in said Quitclaim Deed as S 00°23'11" W);

thence along said centerline S 00°22'36" W 2693.84 feet; thence at right angles from said centerline S 89°37'24" E 52.85 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point A***; thence N 71°27'11" E 73.26 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point B***; thence N 46°04'44" E 38.13 feet to a point called ***Point D***; thence N 09°11'25" E 2.77 feet to the southwest corner of Building H-216; thence along the west line of said building N 09°11'25" E 48.55 feet to a point, called ***Point F***, and the **True Point of Beginning**;

thence leaving said west building line N 80°48'35" W 25.44 feet to a point in the east line of Building H-215; thence continuing N 80°48'35" W through Building H-215 a distance of 53.37 feet to a point on the west line of Building H-215; thence continuing N 80°48'35" W 11.19 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence N 09°11'25" E 22.85 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 80°48'35" E 19.77 feet to a point on the west line of Building H-215; thence continuing S 80°48'35" E through Building H-215 a distance of 44.79 feet to the most east corner of said Building H-215; thence continuing S 80°48'35" E 25.44 feet; thence along the west line of Building H-216 and its northerly projection S 09°11'25" W 22.85 feet to the true point of beginning.

Containing 2056.50 square feet (0.047 acres), more or less.

The foregoing description is based on the bearing between found UC Davis Control Monuments 620 to 666 as being S 81°32'47" E.

COVENANT DESCRIPTION – EXHIBIT C-6

DOMESTIC SEPTIC SYSTEM 4 AREA
SUBJECT TO RESTRICTION ON LAND USE

All that portion of Lot 37 Rancho Los Putos and projected Section 21, T.8N., R.2E., M.D.B. & M., County of Solano, State of California, being a portion of that certain real property described in Quitclaim Deed recorded May 18, 1999, as Document No. 1999-00042875 Official Records of said county, described as follows:

Commencing at a point in the centerline of Old Davis Road (County Road No. 79) marked by a found aluminum cap monument stamped "Solano County Surveyor," from which a found 1 1/2" brass cap in monument well, accepted as marking the intersection of Becker Road (County Road Nos. 86 and 106) and said Old Davis Road (County Road No. 79), bears S 00°22'36" W 8421.14 feet (cited in said Quitclaim Deed as S 00°23'11" W);

thence along said centerline S 00°22'36" W 2693.84 feet; thence at right angles from said centerline S 89°37'24" E 52.85 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point A***; thence N 71°27'11" E 73.26 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point B***; thence N 46°04'44" E 38.13 feet to a point, called ***Point D***; thence N 09°11'25" E 2.77 feet to the southwest corner of Building H-216; thence along the west line of said building N 09°11'25" E 48.55 feet to a point, called ***Point F***; thence continuing along said west building line N 09°11'25" E 4.29 feet to the **True Point of Beginning**;

thence leaving said west building line N 80°48'35" W 25.44 feet to a point in the east line of Building H-215; thence continuing N 80°48'35" W through Building H-215 a distance of 53.37 feet to a point on the west line of Building H-215; thence continuing N 80°48'35" W 11.19 feet to a point, from which a 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE" bears S 09°11'25" W 4.29 feet; thence N 09°11'25" E 13.00 feet to a point, from which a 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE" bears N 09°11'25" E 5.56 feet; thence S 80°48'35" E 19.77 feet to a point on the west line of Building H-215; thence continuing S 80°48'35" E through Building H-215 a distance of 44.79 feet to a point on the east line of said Building H-215; thence continuing S 80°48'35" E 25.44 feet; thence along the west line of Building H-216 and its northerly projection S 09°11'25" W 13.00 feet to the true point of beginning.

Containing 1170.00 square feet (0.027 acres), more or less.

The foregoing description is based on the bearing between found UC Davis Control Monuments 620 to 666 as being S 81°32'47" E.

COVENANT DESCRIPTION – EXHIBIT C-7

DRY WELLS A-E AREA

SUBJECT TO CONTINGENT REMEDIATION AND SOIL MANAGEMENT PLAN

All that portion of Lot 37 Rancho Los Putos and projected Section 21, T.8N., R.2E., M.D.B. & M., County of Solano, State of California, being a portion of that certain real property described in Quitclaim Deed recorded May 18, 1999, as Document No. 1999-00042875 Official Records of said county, described as follows:

Commencing at a point in the centerline of Old Davis Road (County Road No. 79) marked by a found aluminum cap monument stamped "Solano County Surveyor", from which a found 1 1/2" brass cap in monument well, accepted as marking the intersection of Becker Road (County Road Nos. 86 and 106) and said Old Davis Road (County Road No. 79), bears S 00°22'36" W 8421.14 feet (cited in said Quitclaim Deed as S 00°23'11" W);

thence along said centerline S 00°22'36" W 2693.84 feet; thence at right angles from said centerline S 89°37'24" E 52.85 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point A***, thence N 22°43'48" W 46.75 feet; thence N 04°18'15" W 8.57 feet; thence N 00°10'20" W 34.24 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point C***; thence N 00°25'23" E 263.54 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point G***, and the **True Point of Beginning**;

thence East 20.30 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence North 23.47 feet; thence East 5.20 feet; thence North 22.00 feet; thence West 5.20 feet; thence North 44.00 feet; thence West 20.00 feet; thence S 00°11'32" W 89.47 feet to the true point of beginning.

Containing 1917.19 square feet (0.044 acres), more or less.

The foregoing description is based on the bearing between found UC Davis Control Monuments 620 to 666 as being S 81°32'47" E.

COVENANT DESCRIPTION – EXHIBIT C-8

EASTERN DOG PENS AREA
SUBJECT TO SOIL MANAGEMENT PLAN

All that portion of Lot 37 Rancho Los Putos and projected Section 21, T.8N., R.2E., M.D.B. & M., County of Solano, State of California, being a portion of that certain real property described in Quitclaim Deed recorded May 18, 1999, as Document No. 1999-00042875 Official Records of said county, described as follows:

Commencing at a point in the centerline of Old Davis Road (County Road No. 79) marked by a found aluminum cap monument stamped "Solano County Surveyor," from which a found 1 1/2" brass cap in monument well, accepted as marking the intersection of Becker Road (County Road Nos. 86 and 106) and said Old Davis Road (County Road No. 79), bears S 00°22'36" W 8421.14 feet (cited in said Quitclaim Deed as S 00°23'11" W);

thence along said centerline S 00°22'36" W 2693.84 feet; thence at right angles from said centerline S 89°37'24" E 52.85 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point A***; thence S 53°01'21" E 243.86 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point E***; thence S 89°07'50" E 207.70 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE" and the **True Point of Beginning**;

thence N 09°15'00" E 168.30 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 80°45'00" E 207.80 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 09°15'00" W 168.30 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence N 80°45'00" W 207.80 feet to the true point of beginning.

Containing 34972.74 square feet (0.803 acres), more or less.

The foregoing description is based on the bearing between found UC Davis Control Monuments 620 to 666 as being S 81°32'47" E.

COVENANT DESCRIPTION – EXHIBIT C-9

SOUTHWEST TRENCHES AREA

SUBJECT TO CONTINGENT REMEDIATION AND SOIL MANAGEMENT PLAN

All that portion of Lot 37 Rancho Los Putos and projected Section 21, T.8N., R.2E., M.D.B. & M., County of Solano, State of California, being a portion of that certain real property described in Quitclaim Deed recorded May 18, 1999, as Document No. 1999-00042875 Official Records of said county, described as follows:

Commencing at a point in the centerline of Old Davis Road (County Road No. 79) marked by a found aluminum cap monument stamped "Solano County Surveyor," from which a found 1 1/2" brass cap in monument well, accepted as marking the intersection of Becker Road (County Road Nos. 86 and 106) and said Old Davis Road (County Road No. 79), bears S 00°22'36" W 8421.14 feet (cited in said Quitclaim Deed as S 00°23'11" W);

thence along said centerline S 00°22'36" W 2693.84 feet; thence at right angles from said centerline S 89°37'24" E 52.85 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point A***, and the **True Point of Beginning**;

thence N 09°11'25" E 34.10 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 80°48'35" E 14.25 feet; thence N 09°11'25" E 14.00 feet; thence S 80°48'35" E 27.50 feet; thence S 09°11'25" W 14.00 feet; thence S 80°48'35" E 23.09 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point B***, from which hereinabove described *Point A* bears S 71°27'11" W 73.26 feet; thence S 80°48'35" E 49.65 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S09°11'25" W 33.70 feet; thence S 35°48'35" E 3.54 feet; thence S 80°48'35" E 32.50 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 09°11'25" W 109.80 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence N 78°55'32" W 128.40 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence N 00°27'10" E 98.48 feet; thence N 21°45'41" W 12.06 feet to the true point of beginning.

Containing 19222.27 square feet (0.441 acres), more or less.

The foregoing description is based on the bearing between found UC Davis Control Monuments 620 to 666 as being S 81°32'47" E.

COVENANT DESCRIPTION – EXHIBIT C-10

EASTERN REMEDIATION SUPPORT AREA

All that portion of Lot 37 Rancho Los Putos and projected Section 21, T.8N., R.2E., M.D.B. & M., County of Solano, State of California, being a portion of that certain real property described in Quitclaim Deed recorded May 18, 1999, as Document No. 1999-00042875 Official Records of said county, described as follows:

Commencing at a point in the centerline of Old Davis Road (County Road No. 79) marked by a found aluminum cap monument stamped "Solano County Surveyor," from which a found 1 1/2" brass cap in monument well, accepted as marking the intersection of Becker Road (County Road Nos. 86 and 106) and said Old Davis Road (County Road No. 79), bears S 00°22'36" W 8421.14 feet (cited in said Quitclaim Deed as S 00°23'11" W);

thence along said centerline S 00°22'36" W 2693.84 feet; thence at right angles from said centerline S 89°37'24" E 52.85 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point A***; thence N 71°27'11" E 73.26 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point B***; thence N 46°04'44" E 38.13 feet to a point, called ***Point D***, and the **True Point of Beginning**;

thence S 80°48'35" E 61.76 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 09°11'25" W 30.50 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence N 80°48'35" W 35.00 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 09°11'25" W 33.70 feet; thence S 35°48'35" E 3.54 feet; thence S 80°48'35" E 32.50 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 09°11'25" W 109.80 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 79°15'54" E 66.27 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point E***, from which hereinabove described Point A bears N 53°01'21" W 243.86 feet; thence North 199.46 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence West 60.80 feet to a point in east line of Building H-216; thence along said building S 09°11'25" W 6.14 feet to the southeast corner of said building; thence along the south line of said building N 80°48'35" W 36.14 to the southwest corner of said building; thence leaving said building line S 09°11'25" W 2.77 feet to the true point of beginning.

Containing 11398.47 square feet (0.262 acres), more or less.

The foregoing description is based on the bearing between found UC Davis Control Monuments 620 to 666 as being S 81°32'47" E.

COVENANT DESCRIPTION – EXHIBIT C-11

WESTERN REMEDIATION SUPPORT AREA

All that portion of Lot 37 Rancho Los Putos and projected Section 21, T.8N., R.2E., M.D.B. & M., County of Solano, State of California, being a portion of that certain real property described in Quitclaim Deed recorded May 18, 1999, as Document No. 1999-00042875 Official Records of said county, described as follows:

Commencing at a point in the centerline of Old Davis Road (County Road No. 79) marked by a found aluminum cap monument stamped "Solano County Surveyor", from which a found 1 1/2" brass cap in monument well, accepted as marking the intersection of Becker Road (County Road Nos. 86 and 106) and said Old Davis Road (County Road No. 79), bears S 00°22'36" W 8421.14 feet (cited in said Quitclaim Deed as S 00°23'11" W);

thence along said centerline S 00°22'36" W 2693.84 feet; thence at right angles from said centerline S 89°37'24" E 52.85 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point A***, and the **True Point of Beginning**;

thence N 09°11'25" E 34.10 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence S 80°48'35" E 14.25 feet; thence N 09°11'25" E 14.00 feet; thence S 80°48'35" E 27.50 feet; thence S 09°11'25" W 14.00 feet; thence S 80°48'35" E 23.09 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point B***, from which hereinabove described *Point A* bears S 71°27'11" W 73.26 feet; thence N 09°11'25" E 37.90 feet; thence N 80°48'35" W 2.55 feet to the southerly terminus of the east line of Building H-215; thence along said Building H-215 the following four courses: N 80°48'35" W 30.01 feet, S 09°11'25" W 9.34 feet, N 80°48'35" W 14.69 feet and N 09°11'25" E 45.30 feet; thence leaving said Building H-215, N 80°45'35" W 23.47 feet; thence S 01°59'38" E 21.62 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE"; thence West 31.00 feet to a set 5/8" rebar with 2" brass cap, stamped "CERCLA Land Use Control – US DOE", called ***Point C***; thence S 00°10'20" E 34.24 feet; thence S 04°18'15" E 8.57 feet; thence S 22°43'48" E 46.75 feet to the true point of beginning.

Containing 4433.49 square feet (0.102 acres), more or less.

The foregoing description is based on the bearing between found UC Davis Control Monuments 620 to 666 as being S 81°32'47" E.

Table B-1. Contaminants Detected at Concentrations Above Background in the Radium/Strontium Treatment Systems Area, 0–10 Feet Below Ground Surface (continued)

Notes:
Concentrations reflect post-removal-action conditions.
Includes inorganic constituents with statistical test results indicating above-background concentrations in soil from 0 to 10 feet below ground surface (UC Davis 2004).
Includes organic constituents with detection frequency of 5% or more in soil from 0 to 10 feet below ground surface (SWRA Table 2 [UC Davis 2004]).
Copy of soil data provided in Appendix D.
[a] Background values for surface soil (0–4 feet below ground surface) and subsurface soil (greater than 4 feet below ground surface) provided for constituents with statistically significant vertical stratification (DOE 2000a; DOE 2000b). Single background value provided for nonstratified constituents.

Abbreviations:
DDE = dichlorodiphenyldichloroethylene
DDT = dichlorodiphenyltrichloroethane
µg/kg = micrograms per kilogram
mg/kg = milligrams per kilogram
pCi/g = picocuries per gram
SWRA = Site-Wide Risk Assessment

Table B-2. Contaminants Detected at Concentrations Above Background in the Domestic Septic System 3, 0–10 Feet Below Ground Surface

Constituent	Samples	Detections	Detections Above Background	Sample ID Number of Maximum Concentration	Concentration Range	Detection Limit Range	Surface/Subsurface Soil Background[a]	Units	Depth of Maximum (feet)
1,3-Dichlorobenzene	10	1	1	SSIBF155	0.286–0.286	9.6–367	0	µg/kg	6.5
1,4-Dichlorobenzene	10	2	2	CSD3C001	0.579–0.819	9.6–367	0	µg/kg	9

Notes:
Concentrations reflects current conditions after completion of a maintenance action to remove all concrete materials from the area.
Includes inorganic constituents with statistical test results indicating above-background concentrations in soil from 0 to 10 feet below ground surface (UC Davis 2004).
Includes organic constituents with detection frequency of 5 percent or more in soil from 0 to 10 feet below ground surface. SWRA Table 2 (UC Davis 2004).
Copy of soil data provided in Appendix D.
[a] Background values for surface soil (0–4 feet below ground surface) and subsurface soil (greater than 4 feet below ground surface) provided for constituents with statistically significant vertical stratification (DOE 2000a; DOE 2000b). Single background value provided for nonstratified constituents.

Abbreviations:
DDD = dichlorodiphenyldichloroethane
DDE = dichlorodiphenyldichloroethylene
DDT = dichlorodiphenyltrichloroethane
µg/kg = micrograms per kilogram
mg/kg = milligrams per kilogram
NA = not applicable
pCi/g = picocuries per gram
SWRA = Site-Wide Risk Assessment
