## Abbreviations

AFFF	aqueous film-forming foam
CAS	Chemical Abstracts Service
CY	calendar year
DOE	U.S. Department of Energy
EPA	U.S. Environmental Protection Agency
ng/L	nanograms per liter
PFAS	per- and polyfluoroalkyl substances
PFOA	perfluorooctanoic acid
PFOS	perfluorooctane sulfonate
PLFTS	Present Landfill Treatment System
SAP	Sampling and Analysis Plan
WQCC	Water Quality Control Commission

## 1.0 Introduction

Per- and polyfluoroalkyl substances (PFAS) are a group of thousands of man-made chemicals that have been in use since the 1930s and are found in a variety of industrial and commercial products. Common applications include cosmetics, food packaging, stain- and water-resistant articles and treatments, nonstick coatings such as Teflon, and many others. In addition, PFAS have been used in metallurgy and have been important ingredients in aqueous film-forming foam (widely referred to by its abbreviation, AFFF) used in firefighting. Some PFAS have been identified as potentially harmful to human health and are being investigated at facilities across the nation.

In consultation with the Colorado Department of Public Health and Environment and the U.S. Environmental Protection Agency (EPA), the U.S. Department of Energy (DOE) developed a Sampling and Analysis Plan (SAP), *Sampling Plan for PFOA/PFOS at the Rocky Flats Site, Colorado* (DOE 2019), that described a limited sampling program at the Rocky Flats Site, Colorado (referred to as the Site). Eight locations were sampled to screen groundwater and surface water for the presence of two PFAS that have received the greatest scrutiny, perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS). These compounds were detected in samples collected in 2019 from the Site (DOE 2020). Two of the locations produced samples with concentrations exceeding EPA's 2016 nonenforceable drinking water health advisory limit of 70 nanograms per liter (ng/L, or parts per trillion) for the sum of the concentrations of PFOA + PFOS. These two locations are a monitoring well near the former Rocky Flats Fire Department and associated training area and the influent to the Present Landfill Treatment System (PLFTS) that treats seepage from the former landfill.

Based on the 2019 screening results, DOE developed a new SAP in 2021, *Sampling and Analysis Plan for PFAS at the Rocky Flats Site, Colorado* (DOE 2021), that specifies additional sampling to further assess the presence of PFAS at the Site. The SAP describes the special clothing, sampling preparations, sampling staff preparations, and other special requirements that are specific to collecting samples for the analysis of PFAS. The new SAP increases the number of sample locations from 8 to 12 (Figure 1). The additional monitoring locations are near the former fire department and at the PLFTS—the two locations that presented the highest concentrations of PFOA + PFOS in 2019. The target analytes were increased to 28 PFAS, including PFOA, PFOS, and other PFAS listed in the Colorado Water Quality Control Commission (WQCC) Policy 20-1 (WQCC 2020), hereafter called the Colorado WQCC Policy, as well as three PFAS that are not listed in that policy. This sampling will be conducted quarterly for a total of 8 quarters (2 years). Results are provided in quarterly reports; the report for the fourth quarter of each calendar year is combined with an annual report. The quarterly reports are brief data summaries, and the annual reports include additional information. Sampling as described in this SAP began in the third quarter of calendar year (CY) 2021. This report describes the sampling activities and results for the fourth quarter CY 2022 and provides a summary of results from CY 2019 through CY 2022.

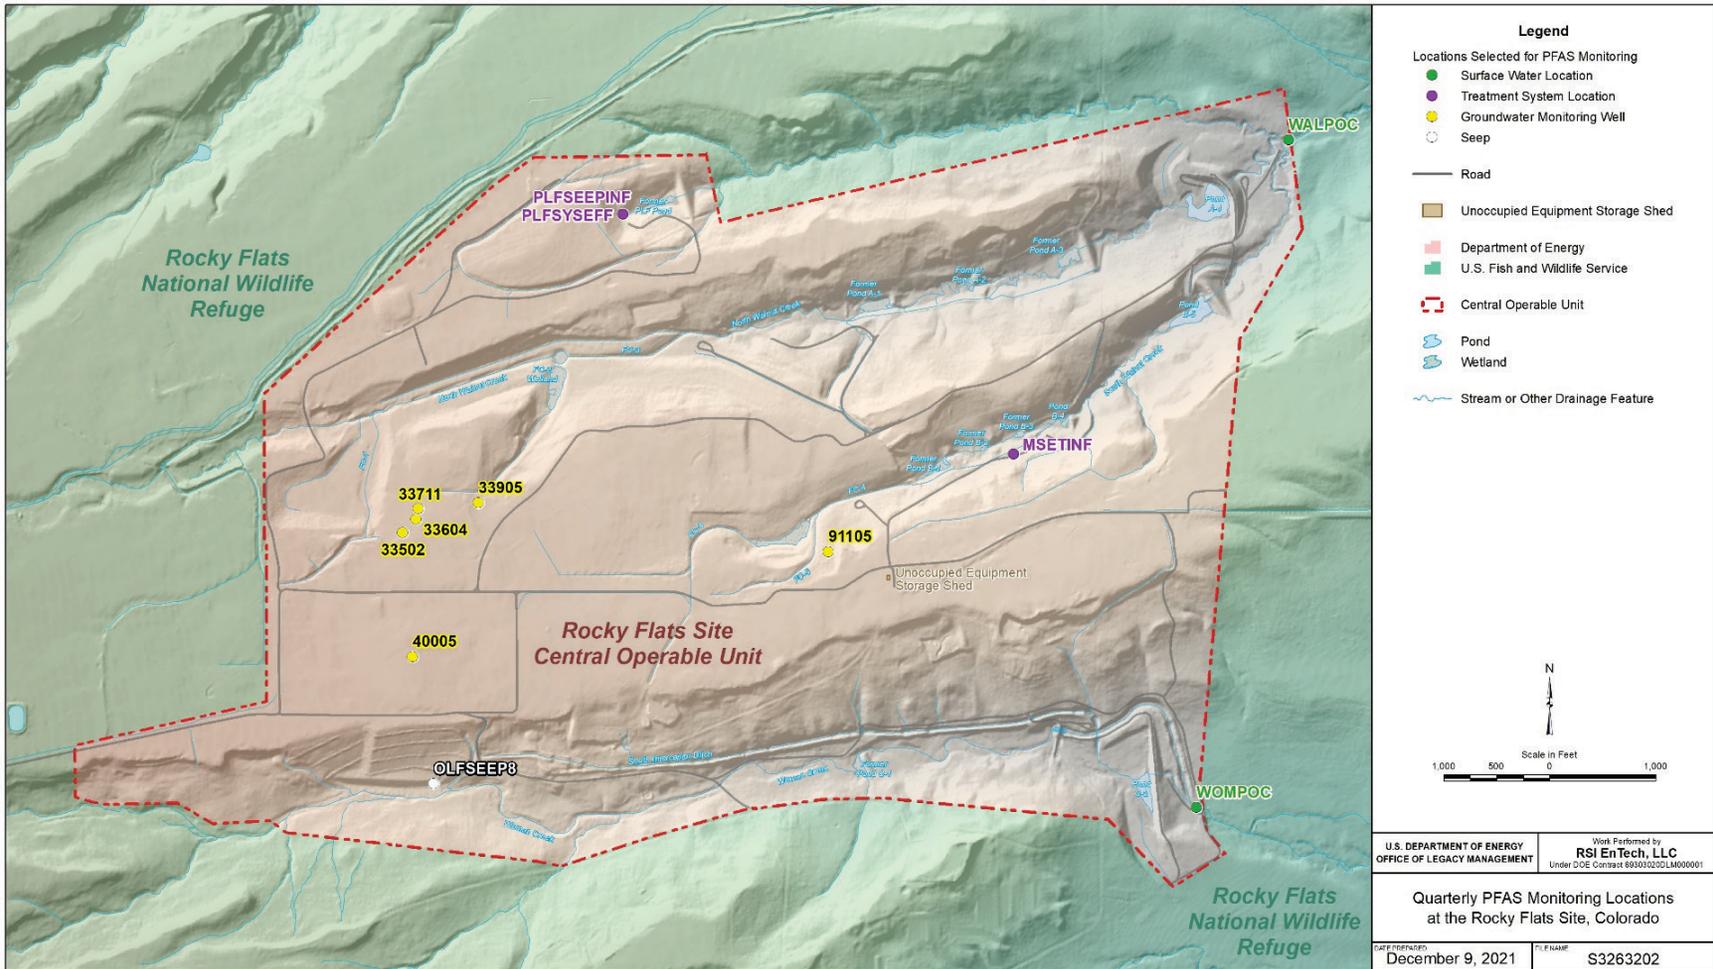

Figure 1. Central Operable Unit with PFAS Sampling Locations

## 2.0 Monitoring Highlights: Fourth Quarter CY 2022

The WALPOC monitoring location was dry. All other locations were successfully sampled. Sampling events are summarized in Table 1.

Table 1. PFAS Sampling Events in Fourth Quarter 2022

WOMPOC		RFS01-15.2209017-014	10/13/2022 15:27	F

**Note:**

<sup>a</sup> “Dummy” location codes are assigned to quality assurance/quality control samples (sample types D, E, FB) that are physically collected at the actual locations indicated. Refer to the *Sampling and Analysis Plan for PFAS at the Rocky Flats Site, Colorado* (DOE 2021) for additional information on sample types.

**Abbreviations:** D = duplicate, E = equipment rinse, F = field, FB = field blank

## 3.0 Analytical Data: Fourth Quarter CY 2022

Analytical data for the fourth quarter of CY 2022 are provided in Table 3, and field parameter data are provided in Table 4. Both tables are attached at the end of this report.

Due to laboratory error, the analytical data in Table 3 are unusual and warrant explanation. Each compound in every sample is represented by two results. When initially preparing sample aliquots for analysis, the laboratory incorrectly diluted each one, rather than only those requiring dilution based on concentration. This correspondingly increased the detection limits by an undesirable amount (e.g., if the sample water is diluted by a factor of 10, the detection limit for that diluted sample is increased by a factor of 10).

Performing dilutions and analyzing the diluted sample water is a routine approach for analytical laboratories when analyzing water samples with elevated concentrations of one or more analytes of interest but is only necessary when analyte concentrations are elevated. If analyte

concentrations are low, diluting the sample aliquot can essentially render the analyte undetectable at the higher detection limit. In the case of the fourth-quarter samples, the initial results returned by the laboratory were predominantly nondetects due to the high detection limits caused by unnecessary dilutions. This error was recognized upon initial review of the data, and the laboratory was instructed to properly reanalyze the samples. However, by the time reanalysis was performed, the sample hold time limit was exceeded.

This chain of events is the reason for the unusual and numerous result qualifiers in Table 3. The many R-qualified (i.e., rejected) results were assigned during the data validation process to results from the initial, diluted sample analyses. In addition, the laboratory assigned H qualifiers to results obtained from the reanalysis, signifying hold time exceedance. Those results were subsequently assigned J qualifiers (estimated value) during the validation process due to the hold time issue.

## **4.0 Summary of PFAS Monitoring at Rocky Flats in CY 2022**

Surface water location WALPOC was successfully sampled in the second quarter but was dry the other three quarters of 2022. Surface water location WOMPOC was dry in the first quarter but was successfully sampled the other three quarters of 2022. All other designated locations (Figure 1) produced sufficient water for sampling. Other than the dry surface water locations, there were no difficulties in collecting samples.

Analytical results for PFOA and PFOS in 2022 were similar to those obtained in 2019, the first year of PFAS monitoring, and also those reported in 2021. Because of the greater health concerns associated with PFOA and PFOS, those were the only PFAS analyzed in 2019, while the samples collected in 2021 and 2022 were analyzed for additional PFAS compounds identified in the Colorado WQCC Policy (WQCC 2020). Table 2 summarizes concentrations of PFOA and PFOS in samples collected in 2019, 2021, and 2022; the concentrations are fairly consistent over time.

One deviation from the SAP (DOE 2021) occurred in 2021 and 2022. While the SAP lists 28 PFAS to be analyzed, one of these compounds was not analyzed. The omitted compound is also not included in the list of 25 PFAS in the Colorado WQCC Policy (WQCC 2020, Table 1), which formed the basis for the target analytes listed in the SAP (DOE 2021, Table 3). The omitted PFAS is ammonium perfluoro-2-methyl-3-oxahexanoate (HPFO-DA, GenX; Chemical Abstracts Service [CAS] No. 62037-80-3), a PFAS salt that the laboratory does not analyze. However, the acid form was analyzed; it is listed by the laboratory under the name perfluoro-2-propoxypropionic acid (GenX, CAS No. 13252-13-6; also known by other names).

**Abbreviations:**

- D = duplicate
- E = equipment rinse
- F = field sample
- FB = field blank
- H = hold time concern
- J = estimated
- N = recovery outside control limits
- QC = quality control sample (dummy location code)
- R = rejected
- SL = surface location
- TS = treatment system
- U = analytical result below detection limit
- WL = well

Table 4. Field Parameter Results for Water Samples – Fourth Quarter CY 2022

Location Code	Date Sampled	Parameter	Result	Unit
33502	10/13/2022 11:23	Alkalinity, Total (as CaCO <sub>3</sub> )	773	mg/L
33502	10/13/2022 11:23	pH	7.28	s.u.
33502	10/13/2022 11:23	Specific Conductance	2200	umho/cm
33502	10/13/2022 11:23	Temperature	15.57	C
33502	10/13/2022 11:23	Titration	773	mg/L
33502	10/13/2022 11:23	Turbidity	4.85	NTU
33604	10/13/2022 11:59	Alkalinity, Total (as CaCO <sub>3</sub> )	414	mg/L
33604	10/13/2022 11:59	pH	6.38	s.u.
33604	10/13/2022 11:59	Specific Conductance	2097.67	umho/cm
33604	10/13/2022 11:59	Temperature	15.85	C
33604	10/13/2022 11:59	Titration	414	mg/L

WOMPOC	10/13/2022 8:38	Alkalinity, Total (as CaCO <sub>3</sub> )	166	mg/L
WOMPOC	10/13/2022 8:38	pH	6.58	s.u.
WOMPOC	10/13/2022 8:38	Specific Conductance	449.6	umho/cm
WOMPOC	10/13/2022 8:38	Temperature	11.51	C
WOMPOC	10/13/2022 8:38	Titrator	166	mg/L
WOMPOC	10/13/2022 8:38	Turbidity	1.64	NTU

**Abbreviations:**

C = Celsius

CaCO<sub>3</sub> = calcium carbonate

mg/L = milligrams per liter

NTU = nephelometric turbidity units

s.u. = standard pH unit

umho/cm = micromhos per centimeter
