

319.1 WAR

Dr. C. Slesser, Acting Chief, Office of Information Control & Publications  
Dr. E. S. Wolf, M.D., Medical Division

March 3, 1948

WEEKLY ACTIVITY REPORT - FEB. 26 TO MARCH 3

SYMBOL: AECM-11 NY

- \* A thorough study of the hazards of uranium machining operations by the Chapman Valve Company was begun by Mr. Harris, of the Industrial Hygiene Section.
- \* Mr. Hayden, Chief of the Radiation Survey Section made a thorough inspection of the hazards of rolling uranium by the Simond Saw and Steel Company, Lockport, New York. Unsafe conditions were noted and recommendations were made for improvement in operations.
- \* A team of members from the Industrial Hygiene, Radiation Survey, and Safety Sections, headed up by Mr. Eisenbud, are spending a week at the plant of the Mallinckrodt Chemical Works, St. Louis, Missouri in connection with the new program now being designed for operation. A thorough health and safety program will be designed into the new process from the ground floor up.  
Equipment for the Industrial Hygiene Laboratory facilities is being procured and alterations are being made on available space to accommodate such equipment.
- \* William H. Ray, Health Physics Consultant visited Western Reserve University where research under the direction of Dr. H. L. Friedell is being carried on. Mr. Ray investigated the use of radioactive isotopes and will submit a report with recommendations for safety

erry/za handling of such materials.
