aging specifications, processing facilities, transportation, instrument ation for measuring radiation levels and contamination, radiation safety procedures to be followed in collecting, storing, packaging, and transporting the material; site of disposal, including depth of water at the proposed site, and the records of disposal that will be maintained. Before a license is granted, these data must be evaluated by the Commission's radiation protection sod waste disposal staff.

The Commission publishes in the Federal Register: (a) receipt of all applications for sea disposal, (b) proposed issuance of such license and (c) all license issuances. Copies of these notices are sent to appropriate State and local agencies and are filed in the Commission's Public Document Room. State and local officials and the public may request hearings on such actions before they become final.

SPECIAL REACTOR MATERIALS

Private industry is supplying both Government and private needs for special reactor materials except for heavy water and boron 10, and industry is assisting in distribution of these two materials.

Zirconium and *hafnium* are supplied by Mallory-Sharon (formerly National Distillers Products Corp.), Columbia-National (formerly NRC Metals Corp.) and the Carborundum Co. The Commission has contracted to purchase a total of approximately 2.2 million pounds of zirconium annually from these three companies for a 5-year period, as well as their entire hafnium production. Because private plant capacity is adequate for existing and anticipated non-Government needs for zirconium, the Government-owned plant at Albany, Oreg. was shut down in January 1958.

All procurement of niobium (columbium) for the Commission was initially made through the Pittsburgh Operations Office. Since improved domestic market conditions have made enough niobium readily available on the opon market to meet continued moderate requirements, centralized procurement was discontinued in June.

'Beryllium metal is being produced in the privately owned plants of hite Brush Beryllium Co. of Cleveland, Ohio and the Beryllium Corp. of Reading, Pa. The Commission is purchasing approximately 75,000 pounds annually from these two sources under a 5-year contract. The Commission-owned plant at Luckey, Obio, discontinued production in January 1958, except for certain scrap recovery, and this was essentially complete at the year's end.

Graphite of reactor grade purity continues to be available on a commercial basis from a number of manufacturers including National Carbon Co., Speer Carbon Co., United Carbon Products Co. and Great Lakes Carbon Corp.

Heavy water is sold by quantities of 125 pound by commercial firms where for packaging and resale, gas and special "deuters

Boron 10 continues to June 1958, this materia Michigan Chemical Corp. Chicago Operations Offic 10 continue to be availational Laboratory.

The new distribution is of the Commission's carrie Falls, N. Y.
