Mr. Shaun Maloney  
1496 Surface Road  
Eaton, Ohio 45320

Dear Mr. Maloney:

This is a followup letter to your telephone request of November 23; 1994, for information concerning various subcontractors to the U.S. Department of Energy facility in Fernald, Ohio. Per your request:

- Historical documents relating to the former Associated Aircraft Tool and Manufacturing Company in Fairfield, Ohio;
- Historical documents relating to the former Herring-Hall-Marvin Safe Company in Hamilton, Ohio; and
- Status of sites identified as Fernald subcontractors during record searches during the 1970s and 1980s.

The requested information is enclosed. If you have any questions, please call me at 301-427-1719.

Sincerely,

A handwritten signature in cursive script, appearing to read "W. Alexander Williams".

**Formerly Utilized Sites Remedial Action Program**  
**U. S. Department of Energy**  
**Summary of 81 Sites Associated with National Lead of Ohio**

The following summary information has been prepared for 81 sites which performed services or supplied goods to the Department of Energy's predecessor organizations. These sites were or are being evaluated under the Department of Energy's Formerly Utilized Sites Remedial Action Program (FUSRAP).

For a site to be included under FUSRAP, two basic requirements must be met. First, contamination at a site, due to activities performed for DOE predecessor organizations, must be above radiological guideline levels. Second, DOE must have authority to conduct remedial action at a site. Authority is determined by considering the following factors:

- if a DOE predecessor agency had significant control over operations at the site,
- if a DOE predecessor agency was responsible for assuring protection of health, safety, and the environment at a site,
- if the waste, residuals, or radioactive materials at a site is the result of DOE predecessor-related operations,
- if the site must be in need of further cleanup as a result of DOE predecessor-related activities, and
- if the current owner of a site accepted responsibility for the site with knowledge of its contaminated condition and that additional remedial measures were necessary before the site would be acceptable for unrestricted use by the public.
