Mr. J. Carrol Wilson
General Manager
Atomic Energy Commission
1901 Constitution Avenue
Washington, D. C.

Dear Sir:

In the course of our nuclear research we are planning to study the energy threshold and cross section for fission. For this program we require a separated sample of metallic Uranium 238 of high purity. A quantity of at least 5 grams would probably be sufficient for our purpose, and this was included in our application for license to the Atomic Energy Commission. This license has been approved, and we would appreciate information as to how to proceed to obtain this material.

Any assistance you may give us will be greatly appreciated.

Very truly yours,

W. E. Shoupp, Manager
Electronics and Nuclear
Physics Dept.
