Subject: Main Site Metals Data Gap Sampling, Colonie FUSRAP Site, Colonie,  
NY

Dear Mr. Abunaw:

As discussed in our recent October 2012 meeting in your office, USACE is in the process of completing decision documents to administratively close out the Soils work at the Colonie Site. USACE plans to mobilize to the site to perform some additional metals characterization work (post interim action). The mobilization date for the main site metals data gap sampling is Monday, 7 January 2013. The USACE plans to perform 14 geoprobe borings to an approximate depth of 20 feet bgs to provide additional vertical extent data for lead, copper and arsenic. The data will be used in the Remedial Investigation Report to supplement the metals data collected during the removal action.

Please see the attached figure that shows the proposed boring locations. Should you have any questions, please call me at (917) 790-8230.

Sincerely

*Phyllis Della Camera*
