## Abbreviations

AFFF	aqueous film-forming foam
CY	calendar year
DOE	U.S. Department of Energy
EPA	U.S. Environmental Protection Agency
ng/L	nanograms per liter
PFAS	per- and polyfluoroalkyl substances
PFOA	perfluorooctanoic acid
PFOS	perfluorooctane sulfonate
PLFTS	Present Landfill Treatment System
SAP	Sampling and Analysis Plan
WQCC	Water Quality Control Commission

## 1.0 Introduction

Per- and polyfluoroalkyl substances (PFAS) are a group of thousands of man-made chemicals that have been in use since the 1930s and are found in a variety of industrial and commercial products. Common applications include cosmetics, food packaging, stain- and water-resistant articles and treatments, nonstick coatings such as Teflon, and many others. In addition, PFAS have been used in metallurgy and have been important ingredients in aqueous film-forming foam (widely referred to by its abbreviation, AFFF) used in firefighting. Some PFAS have been identified as potentially harmful to human health and are being investigated at facilities across the nation.

In consultation with the Colorado Department of Public Health and Environment and the U.S. Environmental Protection Agency (EPA), the U.S. Department of Energy (DOE) developed a Sampling and Analysis Plan (SAP), *Sampling Plan for PFOA/PFOS at the Rocky Flats Site, Colorado* (DOE 2019), that described a limited sampling program at the Rocky Flats Site, Colorado. Eight locations were sampled to screen groundwater and surface water for the presence of two PFAS that have received the greatest scrutiny, perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS). These compounds were detected in samples collected in 2019 from the Site (DOE 2020). Two of the locations produced samples with concentrations exceeding EPA's nonenforceable drinking water health advisory limit of 70 nanograms per liter (ng/L, or parts per trillion) for the sum of the concentrations of PFOA + PFOS. These two locations are a monitoring well near the former Rocky Flats Fire Department and associated training area and the influent to the Present Landfill Treatment System (PLFTS) that treats seepage from the former landfill.

Based on the 2019 screening results, DOE developed a new SAP in 2021, *Sampling and Analysis Plan for PFAS at the Rocky Flats Site, Colorado* (DOE 2021), that specifies additional sampling to further assess the presence of PFAS at the Site. The SAP describes the special clothing, sampling preparations, sampling staff preparations, and other special requirements that are specific to collecting samples for the analysis of PFAS. The new SAP increases the number of sample locations from 8 to 12 (Figure 1). The additional monitoring locations are near the former fire department and at the PLFTS—the two locations that presented the highest concentrations of PFOA + PFOS in 2019. The target analytes were increased to 28 PFAS, including PFOA, PFOS, and other PFAS listed in Colorado Water Quality Control Commission (WQCC) Policy 20-1 (WQCC 2020), hereafter called the Colorado WQCC Policy, as well as three PFAS that are not listed in that policy. This sampling will be conducted quarterly for a total of 8 quarters (2 years). Results are provided in quarterly reports; the report for the fourth quarter of each calendar year (CY) are combined with an annual report. The quarterly reports are brief data summaries, and the annual reports include additional information. Sampling as described in this SAP began in the third quarter of CY 2021.

## 2.0 Monitoring Highlights: Fourth Quarter CY 2021

The WALPOC monitoring location was dry. All other locations were successfully sampled. Sampling events are summarized in Table 1.

Table 1. PFAS Sampling Events in Fourth Quarter 2021

Location Code	Sample Date and Time	Sample Type	Sample ID
2786	10/21/2021 14:03	FB	RFS01-15.2110009-005
33502	10/21/2021 14:35	F	RFS01-15.2110009-007

WOMPOC	11/29/2021 8:45	D	RFS01-15.2108007-014

**Note:** Refer to the SAP (DOE 2021) for additional information on sample types.

**Abbreviations:** D = duplicate sample, E = equipment rinse sample, F = field sample, FB = field blank

## 3.0 Analytical Data: Fourth Quarter CY 2021

Analytical data for the fourth quarter of CY 2021 are provided in Table 3, and field parameter data are provided in Table 4. Both tables are attached at the end of this report.

## 4.0 Summary of PFAS at Rocky Flats in CY 2021

Quarterly sampling for PFAS in accordance with this SAP began in the third quarter of CY 2021. Surface water locations WOMPOC and WALPOC were dry in the third quarter, and WALPOC remained dry in the fourth quarter. All other designated locations (Figure 1) produced sufficient water for sampling. Other than the dry conditions at these surface water locations, there were no difficulties in collecting samples.

Analytical results for PFAS in 2021 were similar to those obtained in 2019, the first year of PFAS monitoring. However, in 2019 only PFOA and PFOS were analyzed while the samples collected in 2021 were analyzed for those compounds plus others identified in the Colorado

WQCC Policy (WQCC 2020). Table 2 summarizes concentrations of PFOA and PFOS in 2019 and 2021 samples; the concentrations are fairly consistent over time.

Table 2. Summary of PFOA and PFOS Data, 2019 and 2021

Monitoring Wells												
Location	33502		33604		33711		33905		40005		91105

**Notes:** Qualifiers: H = hold time concerns (but not so great as to assign J qualifier), J = estimated result, U = not detected at the listed detection limit.

**Abbreviations:** D = location was dry, NS = location was not scheduled for sampling

One deviation from the SAP (DOE 2021) occurred in both the third and fourth quarters of 2021. While the SAP lists 28 PFAS to be analyzed, one of these compounds was not analyzed. The omitted compound is also not included in the list of 25 PFAS in the Colorado WQCC Policy (WQCC 2020, Table 1), which formed the basis for the target analytes listed in the SAP (DOE 2021, Table 3). The omitted PFAS is ammonium perfluoro-2-methyl-3-oxahexanoate (HPFO-DA, GenX; CAS #62037-80-3), a PFAS salt that the laboratory does not analyze.
