Ms. Angela Carpenter
Remedial Project Manager
Federal Facilities Section
U.S. Environmental Protection Agency, Region II
290 Broadway
New York, NY 10007-1866

Dear Ms. Carpenter:

The U.S. Army Corps of Engineers will implement a Final Status Survey (FSS) at roadways adjacent to the FUSRAP Wayne Superfund Site. Contaminated soils are suspected to exist beneath the intersection of Black Oak Ridge Road along the eastern boundary of the site and Pompton Plains Crossroad.

In accordance with the ROD Explanation of Significant Differences (ESD) (Dec 2003), if these inaccessible soils are made accessible, the Army Corps will conduct an investigation to determine whether or not they contain contaminants above the ROD cleanup levels. In order to support utility upgrades below the roadways planned for this year, the Army Corps will conduct an investigation. If impacted soils are identified, they will be excavated and transported to an off-site disposal facility.

The work will be performed under the following approved work plans and their Addendums for the Wayne vicinity properties:

The *Site safety and Health Plan* (June 2000) and Addendum (April 2003); The *Contractor Quality Control Plan* (February 2001) and Addendum (April 2003); The *Radionuclide and Chemical data Quality Management Plan* that incorporates the *Field Sampling Plan*, the *Final Status Survey Plan*, and the *Quality Assurance Project Plan*, (March 2001) and Addendums (April 2003); and the *Remedial Design/Implementation plan* (February, 2001).

Attached is a Final Status Survey Figure to be used for the investigation of the roadways. The figure provides preliminary measurement locations on a triangular grid spacing pattern.

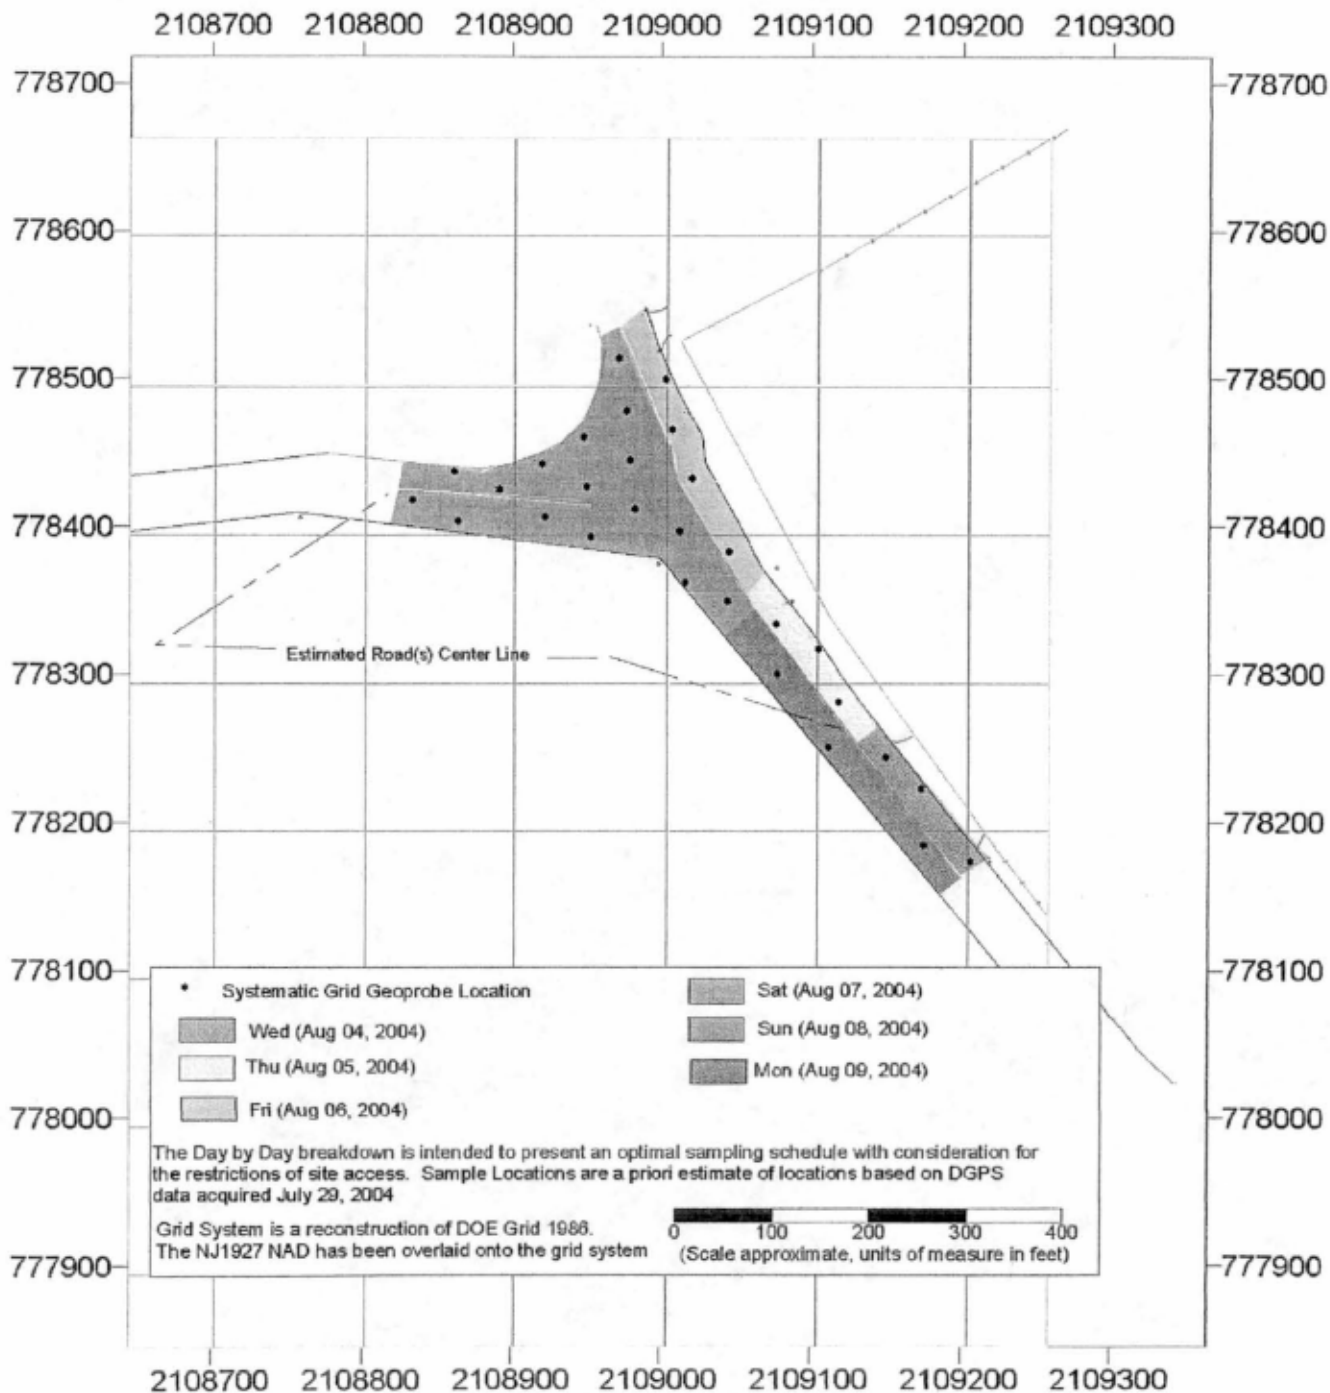

If you have any questions, please call me at 201-226-6616.

Sincerely,

Allen D. Roos
Project Manager
