Draft SAP for Pre-Remedial Investigation of IHSS 118.1, delivered September 2, 1997	
The draft Sampling and Analysis Plan (SAP) for the Pre-Remedial Investigation of Individual Hazardous Substance Site IHSS 118.1 was hand delivered September 2, 1997. It is requested that the US Department of Energy, Rocky Flats Field Office (DOE/RFFO) review this SAP jointly with Kaiser-Hill Company (K-H) to expedite field activities.

Monitored Natural Attenuation of IHSS 118.1, March 1998	
Final Technical Memorandum TM1, Monitored Natural Attenuation of Individual Hazardous Substance Site IHSS 118.1, March 1998. TM1 outlines the rationale for the selection of monitored natural attenuation as a near-term measure to address potential risks posed by Carbon Tetrachloride releases at this Site. Currently, contaminants from IHSS 118.1 do not appear to pose a near-term risk.

Recycling of Carbon Tetrachloride	
Purpose of Contact: Recycling of Carbon Tetrachloride. Approximately 1500 gallons of carbon tetrachloride was removed during the remediation of IHSS 118.1. Two 55-gallon drums of this material, which is approximately 90 percent pure, will be recycled as a substitute for a commercial product and sent to the TSCA incinerator to assist the Department of Energy in testing the incinerator's compliance with MACT standards. The material will not require reclamation before being used. The recycled material is exempt from RCRA/CHWA under 6 CCR 1007-3, Subsection 261.2(e)(1)(ii).
