RI Report: High Priority Sites (881 Hillside Area), March 1, 1988	
Remedial Investigation (RI) report for High Priority Sites (881 Hillside Area), March 1, 1988, Volume III Draft Final. This section presents the results of Hydrogeologic Investigations of the 881 Hillside Area, Operable Unit OU01, at the Rocky Flats Plants (RFP). The sections begins with detailed geologic descriptions of surficial and bedrock materials with emphasis on the hydrologic properties. Geologic descriptions are followed by a discussion of groundwater flow in various materials and their interconnection. The section concludes with a narrative on the nature and extent of groundwater contamination at the 881 Hillside Area. Hydrogeologic and geochemical interpretations are based on information gathered from 23 boreholes and 28 monitor wells completed during the 1986 and 1987 drilling programs.

RI Report: High Priority Sites (881 Hillside Area), March 1, 1988, Volume X	
Submits enclosed Remedial Investigation (RI) report for High Priority Sites (881 Hillside Area), March 1, 1988, Volume X. The Action Description Memorandum (ADM) incorporates comments received from US Department of Energy (DOE) Rocky Flats Area Office (RFAO) and Rockwell International. The four buried hazardous waste sites are designated Solid Waste Management Unit (SWMU) 103, 106, 107, and 119.1. This action is being conducted as an integral part of the Comprehensive Environmental Assessment and Response Program (CEARP) which is a phased effort to identify, assess, and correct existing or potential environmental problems at US Department of Energy (DOE) - Albuquerque Operation Office Facilities. Although, the 881 Hillside Feasibility Study (FS) identified several alternatives, only four alternatives are analyzed in this ADM.

Evaluates impact of IRA proposed for High Priority Sites (881 Hillside Area)	
Environmental Assessment (EA) FOR 881 Hillside (High Priority Sites) Interim Remedial Action (IRA), US Department of Energy (DOE); DOE/EA 0413.US. This EA evaluates the impact of an IRA proposed for the High Priority Sites (881 Hillside Area) at the Rocky Flats Plant (RFP). The Interim Action is to be conducted to minimize the release of hazardous substance for the 881 Hillside Area that pose, a potential long-term threat to public health and the environment. This document integrates current site characterization data and environmental analyses, required by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) or Superfund process, into an environmental assessment pursuant to the National Environmental Policy Act (NEPA); January 1990.

HZMD review and comments on Development and Screening of RA Alternatives, OU01: 881 Hillside Area, TM11, Draft Final, April 1994	
The Colorado Department of Health (CDH) Hazardous Materials and Waste Management Division (HZMD, the Division) reviews and attaches comments on the Development and Screening of Remedial Action Alternatives, Operable Unit OU01: 881 Hillside Area, Technical Memorandum TM11, Draft Final, April 1994. The Division is generally please with the scope of alternatives developed for remediation of contaminated groundwater at Individual Hazardous Substance Site IHSS 119.1. However, it is concerned that the current scope of the development and screening of alternatives may not be adequate to fully support a Corrective Action Decision (CAD) for contaminated subsurface soils at IHSS 119.1 or the other ten IHSSs at OU01. Proposed Plan and Draft Modification of the RFETS RCRA Permit, OU01	
Proposed Plan (PP) and Draft Modification of the Rocky Flats Environmental Technology Site (RFETS) Resource Conservation and Recovery Act (RCRA) Permit, Operable Unit OU01, 881 Hillside Area, May 1996. The Preferred Alternative for OU01 is Soil Excavation and Groundwater Pumping. This alternative is protective of human health and the environment and was selected by the Dispute Resolution Committee (DRC) on August 25, 1995, as part of the dispute resolution process defined within the Interagency Agreement (IAG).

SAR; Id and Delineation of Contaminant Source Area Excavation Design Purposes	
Sampling and Analysis Report (SAR) Identification and Delineation of Contaminant Source Area for Excavation Design Purposes Individual Hazardous Substance Site IHSS 119.1 Operable Unit OU01, April 1996. The purpose of this SAR is to present, summarize, and interpret the data collected during the soil gas survey conducted at OU01 during January and February 1996. The Preferred Alternative remedy presented in the Proposed Plan (PP) originally submitted to the Colorado Department of Public Health and Environment (CDPHE) and the US Environmental Protection Agency (EPA) was disputed. A Dispute Resolution Committee (DRC) or OU01 agreed that the Preferred Alternative remedy for OU01 was to conduct a source removal in the vicinity of IHSS 119.1 to reduce the groundwater contamination over time.

Final Phase III RFI/RI, RFP 881 Hillside Area, OU01, Appendix A, November 1993	
Final Phase III Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI), Volume III, Appendix A for Rocky Flats Plant (RFP) 881 Hillside Area Operable Unit OU01, Geological Data, November 1993. This appendix summarizes the drilling and sampling procedures used during the Phase III RFI/RI field investigation at OU01. In general, drilling and sampling operations followed the guidelines and rationale of the field sampling plan as presented in the Phase III RFI/RI Work Plan (DOE 1991a) (WP). The field investigation commenced in April 1991, when drilling locations specified in the work plan were located and staked in the field. Mobilization was conducted from April through July 1991, and included training field personnel in radiological safety and Environmental Management Department (EMD) Standard Operating Procedure (SOP) (EG&G 1991a), as well as procuring necessary field and support equipment, supplies, and subcontractors. Drilling operations were initiated on August 2, 1991, and were completed on December 9, 1991.

Final Major Modification to OU01, 881 Hillside Area CAD/ROD - Approval	
The US Environmental Protection Agency (EPA) has reviewed and revised the enclosed Final Major Modification to the Operable Unit OU01 Corrective Action Decision / Record of Decision (CAD/ROD), for the 881 Hillside Area (dated November 2000), and discussed various technical details regarding it with US Department of Energy, Rocky Flats Field Offices' (DOE/RFFO) contractors. Through these discussions, the RFCA parties have come to agreement regarding the modification of the OU01 CAD/ROD and the future activities that will occur at OU01 to ensure that the remaining groundwater plume does not adversely impact surface water. This document clearly states our interpretation of the data that has been collected in the OU over the course of more than ten years of study and eight years of Interim Remedial Action. Although there remains some uncertainty in the specific mechanisms at work, the conclusion that has been reached by all parties involved is that natural attenuation is the primary factor limiting the movement of this groundwater plume. Since the RFCA parties are in agreement regarding the present and future actions to take place at OU01, EPA approves the document, as revised on October 24, 2000.

Re: Discontinuance of Groundwater Collection from OU01 Collection Well	
The Final Major Modification to the Operable Unit OU01 Corrective Action Decision / Record of Decision (CAD/ROD) dated January 2001, stated that the OU01 Collection Well would be operated for one year after the signing of the final modification. Based on recent (enclosed) analytical data that demonstrates that groundwater concentrations remain below Tier I Action Levels as defined in the Rocky Flats Cleanup Agreement (RFCA). Beginning in April 2002, water from the collection well will no longer be collected.
