OU02 Surface Water IM/IRA South Walnut Creek Basin	
Information sheet on Operable Unit OU02 Surface Water Interim Measure / Interim Remedial Action (IM/IRA), South Walnut Creek Basin. Water quality investigations have identified the presence of Volatile Organic Compounds (VOCs) and radionuclides in surface waters within OU02 at the Rocky Flats Plant (RFP). OU02, the environmental cleanup area comprising the 903 Pad, Mound and East Trenches Areas (ETA), is located in the southeast corner of the plant about one and a half miles from the outer edge of the plant's boundary at Indiana Street.

Task 3 Shallow, High Resolution Seismic Reflection Profiling in OU02 903 Pad, Mound, and ETA, at RFP, Final Report	
Task 3 Shallow, High Resolution Seismic Reflection Profiling in Operable Unit OU02 903 Pad, Mound and East Trenches Area (ETA) at the Rocky Flats Plant (RFP), Final Report. EG&G Rocky Flats, Inc. is performing remedial investigations, feasibility studies, and remedial/corrective action projects at the RFP under the US Department of Energy's (DOE) Environmental Restoration (ER) Program. Previous remedial investigations conducted at Rocky Flats have identified potential soil, surface water, and groundwater contamination in the vicinity of OU02. Complex stratigraphy and possible structural features underlying OU02 may influence the migration of groundwater. Characterizing the complex stratigraphy and delineating structure by conventional drilling methods alone would be prohibitively expensive. A cost-effective approach was developed and implemented using shallow high-resolution seismic reflection to acquire detailed subsurface geologic information.

Final Surface Water IM/IRA/EA and DD, South Walnut Creek Basin	
Final Surface Water Interim Measures / Interim Remedial Action / Environmental Assessment (IM/IRA/EA) and Decision Document, South Walnut Creek Basin, October 1994 [Final issued March 8, 1991, Revision date October 11, 1994]. Water quality investigations have identified the presence of Volatile Organic Compound (VOC) and radionuclide contamination of surface water at the Rocky Flats Plant (RFP). The subject IM/IRAP/EA addresses contaminated surface water in a portion of the South Walnut Creek drainage basin located within an area identified at Operable Unit OU02. There is no immediate threat to public health and the environment posed by this surface water contamination. Implementation of the Surface Water IM/IRA will enhance the DOE's efforts towards containing and managing contaminated surface water, and will mitigate downgradient migration of contaminants.

Interim Report, Groundwater Recharge Study, RFP Site	
Interim Report Groundwater Recharge Study; Draft: September 15, 1993; Final: October 31, 1993. The purpose of this study is to assess rates and fate of infiltration of precipitation into and through the Rocky Flats Alluvium at two locations underlying Operable Unit OU02. The RF Alluvium, along with limited occurrences of bedrock sandstone, which outcrop and subcrop beneath the Alluvium, comprise the Uppermost Hydrostratigraphic Unit (UHSU) in OU02. Understanding the nature of recharge conditions at the RFP is important relative to managing its water resources, predicting contaminant migration, and addressing remediation of groundwater contamination problems.

OU02 Closure Soil Studies Scientific Notebook for the RFETS, dated July 1994	
Operable Unit OU02 Closure Soil Studies Scientific Notebook for the Rocky Flats Environmental Technology Site (RFETS), dated July 1994. The objectives of the project are to: [1] study and monitor the vertical flow in the soil environment upslope from Seep SW-53 during and after major precipitation events and snowmelt, and [2] assess the relationships between Soil-Pu in the interstitial water and Pu in Seep SW-53. Geohydrological and geochemical data water will provide necessary constraints for the development of Vadose Zone modelings. The geochemical characterization study will include: [1] total concentrations of Pu and Am in soil interstitial waters that move freely down the soil column, and [2] fractionation of actinides to colloidal and dissolved phases in freely flowing waters and interstitial water at various matric potentials.

ID of Wastewater Treatment and Disposal Options for OU07 Seep Water	
Information Only Entry: Identification of Wastewater Treatment and Disposal Options for Operable Unit OU07 Seep Water - US Department of Energy (DOE) received approval of the OU07 Seep Collection Proposed Action Memorandum (PAM) via letter from the State of Colorado, December 8, 1994 (attached). It is apparent that the Sitewide facility treatment concept will not support the OU07 Seep Collection Project Treatment and Disposal needs within the timeframes described by the PAM (schedule for the Sitewide Water Treatment Facility, SWTF, attached). EG&G Rocky Flats, Inc. is therefore requested to redirect their efforts from coordination with the OU01, OU02, or proposed SWTF, and focus instead on securing written acceptance for treatment of OU07 seep water from other existing on-site facilities.
