The CDH approves OU09 EE TM. EE will act as model for other IA OUs.	
The Colorado Department of Health (CDH) approves the Operable Unit OU09: Original Process Waste Lines (OPWL) Environmental Evaluation (EE) Technical Memorandum (TM). Not all of the OUs in the industrialized portion of the Rocky Flats Plant (RFP) are scheduled for a two-phase Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI). Therefore, since this EE will act as a model for the other IA OUs, and since this EE is currently structured in a two-phase investigation format, it will be up to the US Department of Energy, Rocky Flats Office (DOE/RFO) to initiate planning that can complete an entire EE for a one-phase RFI/RI OU.

Response to CDH: EG&G has reviewed modifications to IAG re transfers of IHSSs	
Response to the attached ( ) May 27, 1993 Colorado Department of Health (CDH) letter. EG&G Rocky Flats, Inc. has reviewed the modifications to the Interagency Agreement (IAG) regarding transfers of Individual Hazardous Substance Site (IHSS) 167.2 and IHSS 167.3 from Operable Unit OU06 to OU07; IHSS 196 from OU16 to OU05; and IHSS 197 from OU16 to OU13. Analysis of this action indicates that no impacts have occurred to scope or schedule for the following reasons: {1} IHSS 167.2 and 167.3 were moved into the OU07 boundaries via the quarterly update of the Historical Release Report (HRR). The new locations correspond to areas already sampled by OU07 staff of the potential contaminants of concern; {2} IHSS 196 lies within the boundaries of IHSS 115, which is already being assessed by the OU05 investigation; and {3} IHSS 197 was previously transferred, via the Agency review, into the OU13 Work Plan (WP) and has been budgeted.

<b>OU05-A-000454</b>	12/15/1994
DOE/RFFO request to extend the OU05 and OU06 RFI/RI report schedules	
On November 21, 1994, the US Department of Energy, Rocky Flats Field Office (DOE/RFFO) presented a request to the Colorado Department of Public Health and Environment (CDPHE) and the US Environmental Protection Agency (EPA) to decouple the Environmental Risk Assessment (ERA) section from the Operable Units OU05 and OU06 draft Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI) reports. At that meeting, all parties agreed that rather than decoupling the ERA, the DOE would pursue a milestone extension request so that the ERA could be included in the OU05 and OU06 RFI/RI reports. This request stems from the new scope required to adopt a watershed approach to generating ERAs. Review of the ERA portion of the OU01 RFI/RI Report revealed that the present scope of the OU-based ERAs would not be acceptable to CDPHE and EPA for subsequent ERAs. To this end, the DOE, in concert with CDPHE and EPA, created an ERA methodology based on a watershed approach as described in current ERA practice and EPA guidance. These ERAs will be commonly rooted in three Sitewide Technical Memoranda that describe the ERA approach. These TMs include the ERA Conceptual Model (TM2), Assessment Endpoints (TM1), and Ecological Contaminants of Concern (TM3). Approximately three months must be added to the OU05 and OU06 schedules to accommodate completion of these TMs. The new scope described by moving from the OU-specific ERAs to the new Sitewide TMs and attendant watershed ERAs is the primary justification for the OU05 and OU06 RFI/RI date extensions.

Draft Final Sitewide ERA Methodology, TM3, April 1995	
Draft Final Ecological Risk Assessment (ERA) Methodology, Technical Memorandum TM3, Ecological Chemicals of Concern (ECOCs) Screening Methodology, April 1995. TM3 describes the methodology for identifying ECOCs for use in ERAs associated with environmental investigations at the Rocky Flats Environmental Technology Site (RFETS/Site). A screening level evaluation of contaminants is needed to focus the ERAs on contaminants present at concentrations that may represent a risk to ecological receptors and minimize evaluation of contaminants that do not present a hazard. ECOC screening is part of the problem formulation phase of performing ERAs at Superfund sites. Other components of the problem formulation include development of a site conceptual model to characterize exposure pathways, development of risk characterization objectives, and identification of specific data-quality objectives needed to complete the ERA. The problem formulation phase of each ERA performed at RFETS will be documented in a Problem Formulation TM that will be provided to the EPA and CDPHE for review prior to completion to the ERA analysis.

Draft Final Phase I Resource Conservation Recovery Act (RCRA) Facility Investigation / Remedial Investigation (RFI/RI) Report, Operable Unit OU05: Woman Creek Priority Drainage; Appendix N, OU05/OU06 Watershed Ecological Risk Assessment (ERA); October 1995. This report presents the results of ERAs conducted for the Walnut Creek and Woman Creek watershed. The ERAs represent the ecological portions of the Baseline Risk Assessments (BRA) associated with the RFI/RIs for OU01, OU02, OU04 (in part), OU05, OU06, OU07, OU10 (in part), and OU11. The combined ERA was conducted based on recent agreements among the Colorado Department of Public Health and Environment (CDPHE) and the US Environmental Protection Agency (EPA), and US Department of Energy, Rocky Flats Field Office (DOE/RFFO). ERAs were formerly planned for each OU, and preliminary field investigations were conducted on that basis. The agencies agreed that it is ecologically more appropriate to conduct the ERAs for each watershed, because this scale is more relevant to ecological receptors that are not constrained by administrative boundaries associated with the OUs.

Woman Creek Priority Drainage, TE, proposal Subcontract No. MTS226606-002 NM3.	
Interoffice correspondence: This is Revision 1 to the Technical Evaluation (TE) issued on August 25, 1994. A review/analysis of the proposal under subject subcontract has been performed. This subcontract is for the continuation of the Phase I Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI) Report by Advanced Science Inc. This includes switching from a Basic Ordering Agreement (BOA) to a Master Task System contract. It also includes the Implementation of the Technical Memorandum TM15, Addendum to the Field Sampling Plan (FSP). The following recommendations are provided for finalizing this effort. This proposal appears to adequately address the work contained in the Statement of Work (SOW) and Addendum 1 to the SOW. This TE was revised based on the fact finding meeting held August 31, 1994, with ASI and the Amended Proposal, September 21, 1994.

Rocky Flats Plant Cultural Resource Report - Concurrence	
The Colorado Historical Society provides the reviewed Cultural Resource Report completed for selected parcels of land within the Rocky Flats Plant. The Colorado Historical Society concur that the Lindsay Ranch, 5JF485, is not eligible to the National Register. This ranch was rebuilt after World War II and therefore has not reached the fifty year age criteria. 5JF512, 5JF513, and 5JF514 are ditches that have lost their integrity due to alterations and realignment. They are not eligible to the National Register. 5JF474, a possible homestead destroyed by a fire line, 5JF483, an orchard and 5JF484, a stone structure that has lost its integrity, are not eligible to the National Register. These sites are not associated with persons or events important in history. Sites 5JF79 and 5JF217 consist of rock alignments and rock piles that have not cultural materials associated with them. Due to the uncertainty of their function and cultural association, concur with the need to test these sites before a determination of eligibility is completed. There will be no effect to significant cultural resources by further development within Rocky Flats provided sites 5JF79 and 5JF217 are avoided. If avoidance is not possible then a testing program will have to be initiated to determine their eligibility.

Prelim Report on 5JF217: A Stone Circle Site on Rock Creek, Northwestern Jefferson County, Colorado	
Submits a Preliminary Report on 5JF217: A Stone Circle Site on Rock Creek, Northwestern Jefferson County, Colorado, by Calvin H. Jennings, May 1976. On May 12, 1976, the author and Ms. Anne McNamara, representing the Laboratory of Public Archaeology (LOPA), visited two localities under jurisdiction of the Energy Resource and Development Administration (ERDA) in the vicinity of the Rocky Flats Plant (RFP) in northwestern Jefferson County. Also were accompanied by Ms. Kathleen Anderson, Ms. April Volkand Mr. Ralph Hawes, representing the plant operator, Rockwell International. The purpose of the visit was to assess the potential of a previously unrecorded archaeological site, 5JF217, for nomination to the National Register of Historic Places. Also examined an additional site 5JF79, at the request of our escorts in the hope that we might be able to expand on the information provided by Richard Stuckey and John Slay in their report filed with Ms. Volk on January 26, 1975. Attached is a Archaeological Survey of Colorado Inventory Sheet and a Sketch Map of Location.

Summary of Preliminary work started on the Feasibility Study / Corrective Measures Study (FS.CMS) for Operable Unit OU05. This letter summarizes the US Department of Energy (DOE) approach in evaluating and selecting remedial options for the Individual Hazardous Substance Sites (IHSS) located within OU05. The approach outlined is consistent with the discussions held with regulator staff. The Filter Backwash Pond (IHSS 196) will be included in the presumptive remedy since it is located within the boundary of IHSS 115, the Original Landfill. This focused FS will be conducted in accordance with the US Environmental Protection Agency (EPA) Presumptive Remedy Guidance for Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Municipal Landfills and related guidance. All other IHSS's in OU05 will be addressed using Baseline Risk Assessment (BRA) and Traditional FS/CMS Methodology. These sites include the Ash Pits (IHSS 133.1 - 133.4), the Former Incinerator Site (IHSS 133.5), the Concrete Wash Pad (IHSS 133.5), Detention Ponds C-1 and C-2 (IHSS 142.10 and 142.11, respectively), and three surface disturbance areas (IHSSs 209 and two unnamed areas).

OU05 and OU06 information on Arsenic (As) usage at RFETS	
Operable Units OU05 and OU06 information on Arsenic (As) usage at Rocky Flats Environmental Technology Site (RFETS). There was no discussion of arsenic being used and/or released from any of the past processes used at RFETS. The only possible use of As (thus undocumented) at RFETS could have been as a pesticide for grasshopper control prior to the 1960's or 1970's, when its use was discontinued nationally. Thus, it is unlikely that the Arsenic detected in OU05 and OU06 sediments results from onsite sources.

This public review version of the ER RSOP reflects modifications to RFCA Attachments 5, 10, and the new Attachment 14 that have been approved by the agencies. The modified ER RSOP is scheduled to be released for a thirty-day Public Comment Period on June 16, 2003 as previously discussed. In 1970, four burial sites were located south of the incinerator area. These trenches were used for disposal of ash (and noncombustible trash) from the incinerator that operated for approximately 1952 until 1968. Noncombustible trash, such as counting discs, broken glassware, and metal, was collected in a nearby dumpster and later disposed of in the trenches.

Accelerated Action Design for the OLF Technical Support Memorandum	
Accelerated Action Design for the Original Landfill Rocky Flats Environmental Technology Site Geotechnical Investigation Phase 3 Stability Analysis Technical Support Memorandum, December 2004. The purpose of this memorandum is to provide geotechnical input to support design of the accelerated action alternative at the Original Landfill (OLF). The primary purpose and focus of the geotechnical investigation has been to develop geotechnical data and perform engineering analyses to a level adequate to support final design of the accelerated action. This has culminated with Phase 3 of the investigation, primarily consisting of the stability analysis of the OLF site with various accelerated action alternatives.

Draft Interim Measures / Interim Remedial Action for the Original Landfill (including IHSS Group SW-2; IHSS 115, Original Landfill and IHSS 196, Filter Backwash Pond), December 6, 2004. IHSS Group SW-2 consists of two IHSSs: IHSS 115, the Original Landfill (OLF), and IHSS 196, the Filter Backwash Pond. This IM/IRA summarizes the environmental data for IHSS Group SW-2, compares the data to Rocky Flats Cleanup Agreement (RFCA) action levels, (ALs), presents and evaluates accelerated action alternatives, and describes the proposed action. Recent geotechnical data and groundwater modeling at the OLF are also summarized in the IM/IRA.
