Final Phase I RFI/RI Work Plan, Vol I, 1991	
Final Phase I Resource Conservation Recovery Act (RCRA) Facility Investigation / Remedial Investigation (RFI/RI) Work Plan (WP) Rocky Flats Plant (RFP), Operable Unit OU06: Walnut Creek Priority Drainage, Volume I. This WP includes a Field Sampling Plan (FSP) that presents the investigation planned to evaluate the presence or absence of contamination at Individual Hazardous Substance Sites (IHSSs) within the North and South Walnut Creek drainages. The FSP developed in this WP is based on the requirements of the Interagency Agreement (IAG) amongst the US Department of Energy (DOE), US Environmental Protection Agency (EPA), and the Colorado Department of Health (CDH) and additional work as needed to initially assess each IHSS.

Phase I Resource Conservation Recovery Act (RCRA) Facility Investigation / Remedial Investigation (RFI/RI) Work Plan (WP) Rocky Flats Plant (RFP), Operable Unit OU06: Walnut Creek Priority Drainage, Volume I - Text, Revision 0. In this WP, the existing information is initially summarized to characterize OU06 and a field sampling program is presented to assess the nature and extent of contamination in the twenty-one (21) Individual Hazardous Substance Sites (IHSS) along or within the North and South Walnut Creek drainages. The data generated will be used to begin developing and screening remedial alternatives and to evaluate the need for further studies of the 21 IHSSs. The data will be used to estimate risks to human health and the environment posed by each hazardous substance site.

Response to CDH: EG&G has reviewed modifications to IAG re transfers of IHSSs	
Response to the attached () May 27, 1993 Colorado Department of Health (CDH) letter. EG&G Rocky Flats, Inc. has reviewed the modifications to the Interagency Agreement (IAG) regarding transfers of Individual Hazardous Substance Site (IHSS) 167.2 and IHSS 167.3 from Operable Unit OU06 to OU07; IHSS 196 from OU16 to OU05; and IHSS 197 from OU16 to OU13. Analysis of this action indicates that no impacts have occurred to scope or schedule for the following reasons: {1} IHSS 167.2 and 167.3 were moved into the OU07 boundaries via the quarterly update of the Historical Release Report (HRR). The new locations correspond to areas already sampled by OU07 staff of the potential contaminants of concern; {2} IHSS 196 lies within the boundaries of IHSS 115, which is already being assessed by the OU05 investigation; and {3} IHSS 197 was previously transferred, via the Agency review, into the OU13 Work Plan (WP) and has been budgeted.

DOE/RFFO request to extend the OU05 and OU06 RFI/RI report schedules	
<p>On November 21, 1994, the US Department of Energy, Rocky Flats Field Office (DOE/RFFO) presented a request to the Colorado Department of Public Health and Environment (CDPHE) and the US Environmental Protection Agency (EPA) to decouple the Environmental Risk Assessment (ERA) section from the Operable Units OU05 and OU06 draft Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI) reports. At that meeting, all parties agreed that rather than decoupling the ERA, the DOE would pursue a milestone extension request so that the ERA could be included in the OU05 and OU06 RFI/RI reports. This request stems from the new scope required to adopt a watershed approach to generating ERAs. Review of the ERA portion of the OU01 RFI/RI Report revealed that the present scope of the OU-based ERAs would not be acceptable to CDPHE and EPA for subsequent ERAs. To this end, the DOE, in concert with CDPHE and EPA, created an ERA methodology based on a watershed approach as described in current ERA practice and EPA guidance. These ERAs will be commonly rooted in three Sitewide Technical Memoranda that describe the ERA approach. These TMs include the ERA Conceptual Model, Assessment Endpoints, and Ecological Contaminants of Concern. Approximately three months must be added to the OU05 and OU06 schedules to accommodate completion of these TMs. The new scope described by moving from the OU-specific ERAs to the new Sitewide TMs and attendant watershed ERAs is the primary justification for the OU05 and OU06 RFI/RI date extensions.</p>

Draft Final Sitewide ERA Methodology, TM3, April 1995	
<p>Draft Final Ecological Risk Assessment (ERA) Methodology, Technical Memorandum TM3, Ecological Chemicals of Concern (ECOCs) Screening Methodology, April 1995. TM3 describes the methodology for identifying ECOCs for use in ERAs associated with environmental investigations at the Rocky Flats Environmental Technology Site (RFETS/Site). A screening level evaluation of contaminants is needed to focus the ERAs on contaminants present at concentrations that may represent a risk to ecological receptors and minimize evaluation of contaminants that do not present a hazard. ECOC screening is part of the problem formulation phase of performing ERAs at Superfund sites. Other components of the problem formulation include development of a site conceptual model to characterize exposure pathways, development of risk characterization objectives, and identification of specific data-quality objectives needed to complete the ERA. The problem formulation phase of each ERA performed at RFETS will be documented in a Problem Formulation TM that will be provided to the EPA and CDPHE for review prior to completion to the ERA analysis.</p>

OU06, COC TM4 - Approval	
Operable Unit OU06 Chemicals of Concern (COC) Technical Memorandum TM4 - on December 29, 1994 the US Department of Energy (DOE), received correspondence from the US Environmental Protection Agency (EPA) granting Agency approval of the Walnut Creek Drainage OU06 COC TM4 as stated in EPA's letter this approval is contingent upon DOE's inclusion of Arsenic as a COC in Walnut Creek Stream sediments although EG&G Rocky Flats, Inc.'s OU06 Remedial Investigation (RI) Staff still are of the opinion that Arsenic detected in OU06 sediment samples is derived from natural sources and not from past RFETS activities. Attempts to convince EPA that Arsenic is within background levels have been unsuccessful, therefore, rather than delay the RI schedule further, the OU06 RI staff has accepted EPA's request and are recommending the following process to address the Arsenic issue for OU06 sediments; rationale for excluding Arsenic as a stream sediment COC is attached.

After phone conversation October 2, 1987 regarding the Radiation Control Division's monitoring of Walnut Creek, Ms Kochevar, Chemist / Environmental Specialist with the City of Broomfield, received a follow-up call from Mr. Bob Terry of the Colorado Department of Health (CDH), who also felt that the monitoring program could be more comprehensive with regard to Rocky Flats discharges flowing through Walnut Creek. Since the City of Broomfield has an automated sampling station on Walnut Creek, it is suggested that the city could provide CDH with split samples from this station to insure that samples from each Rocky Flats Plant (RFP) discharge are available for analysis.

Cities meeting held July 27, 1994 on current Ponds conditions	
The attached data shows that the water in the Landfill Pond meets segment four standards and based on this data we request a transfer of 300,000 gallons to Pond A1 and 1,700,000 gallons to A3. This transfer will allow us to draw the Landfill Pond down to approximately 50 percent.

OU05 and OU06 information on arsenic usage at RFETS	
Information Only Entry: Operable Units OU05 and OU06 information on arsenic usage at Rocky Flats Environmental Technology Site (RFETS). There was no discussion of arsenic being used and/or released from any of the past processes used at RFETS. The only possible use of arsenic (thus undocumented) at RFETS could have been as a pesticide for grasshopper control prior to the 1960s or 1970s, when its use was discontinued nationally. Thus, it is unlikely that the arsenic detected in OU05 and OU06 sediments results from onsite sources. [See CERCLA Administrative Record (AR) OU05-A-000701; Jacket 465, Frame 34.0]
