Response to CDH: EG&G has reviewed modifications to IAG re transfers of IHSSs	
Response to the attached () May 27, 1993 Colorado Department of Health (CDH) letter. EG&G Rocky Flats, Inc. has reviewed the modifications to the Interagency Agreement (IAG) regarding transfers of Individual Hazardous Substance Site (IHSS) 167.2 and IHSS 167.3 from Operable Unit OU06 to OU07; IHSS 196 from OU16 to OU05; and IHSS 197 from OU16 to OU13. Analysis of this action indicates that no impacts have occurred to scope or schedule for the following reasons: {1} IHSS 167.2 and 167.3 were moved into the OU07 boundaries via the quarterly update of the Historical Release Report (HRR). The new locations correspond to areas already sampled by OU07 staff of the potential contaminants of concern; {2} IHSS 196 lies within the boundaries of IHSS 115, which is already being assessed by the OU05 investigation; and {3} IHSS 197 was previously transferred, via the Agency review, into the OU13 Work Plan (WP) and has been budgeted.

Notification of minor mod to PAM for PSITS OU07	
<p>The US Department of Energy (DOE) is notifying the US Environmental Protection Agency (EPA) of a Minor Modification to the Proposed Action Memorandum (PAM) for the Passive Seep Interception and Treatment System (PSITS) Operable Unit OU07, Revision 1, March 1996. This is pursuant to Part 10 of the Rocky Flats Cleanup Agreement (RFCA) [OU07-A-000415}. The PSITS presently uses Granular Activated Carbon (GAC) to treat the Volatile Organic Compound (VOC) that are present in the seep levels slightly above stream standards. The DOE is proposing to substitute passive air stripping for the GAC. The passive air stripping is better suited to treating the VOCs of concern. This correspondence is not on letter head paper nor signed by R. R. Sarter, RFCA Project Coordinator.</p>

Presumptive Remedies: Policy and Procedures - EPA Guidance	
EPA Guidance: OSWER Directive 9355.0-47FS: Presumptive Remedies: Policy and Procedures. Since Superfund inception in 1980, the remedial and removal programs have found that certain categories of sites have similar characteristics, such as types of contaminants present, types of disposal practices, or how environmental media are affected. The objective of the presumptive remedies initiative is to use the program's past experience to streamline site investigations and speed up selection of cleanup actions. This directive serves as an overall guide to the presumptive remedies initiative and it's effect on site cleanup. Through a question and answer format, it explains, in general terms, ways in which presumptive remedies will streamline or change the remedial and removal processes from the conventional process and how certain Superfund policies will be affected by the initiative. Additional Key Words for reference: Landfills, Present Landfill, Cover, Cover Design.

Presumptive Remedy for CERCLA Municipal Landfill Sites - EPA Guidance	
EPA Guidance: OSWER Directive 9355.0-47FS: Presumptive Remedy for CERCLA Municipal Landfill Sites. This directive establishes containment as the presumptive remedy for CERCLA municipal landfills. The framework for the presumptive remedy for these sites is presented in a streamlining manual entitled "Conducting Remedial Investigations / Feasibility Studies for CERCLA Municipal Landfill Sites," February 1991. This directive highlights and emphasizes the importance of certain streamlining principles related to the scoping (planning) stages of the RI/FS that were identified in the manual. The directive also provides clarification of and additional guidance in the following areas: (1) the levels of detail appropriate for risk assessment of source areas at municipal landfills, and (2) the characterization of hot spots. Consistent with the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), EPA's expectation was the containment technologies generally would be appropriate for municipal landfill waste because the volume and heterogeneity of the waste generally make treatment impractical. The results of previous pilot projects support this expectation and demonstrate that the manual is an effective tool for streamlining the RI/FS process for municipal landfills. Additional Key Words: Presumptive Remedies, Landfills, Present Landfill, Cover, and Cover Design.

Seep Collection and Treatment Action Memorandum - OU07 Present Landfill	
Seep Collection and Treatment Action Memorandum, Operable Unit No. 7 - Present Landfill (IHSS 114) and Inactive Hazardous Waste Storage Area (IHSS 203); Final Report. This memorandum presents the U.S. Department of Energy's removal action to address the seep flowing from the Present Landfill into the East Landfill Pond, OU07 at the RFETS. The overall objective of the collection system is to eliminate discharge of F039 listed waste contained in the seep water to a surface water body. The collection system is designed to be compatible with source containment as a presumptive remedy for final closure of the landfill in July 1997. Additional Key Words: Seep Treatment System, Seep Collection and Treatment System, Passive Seep Interception and Treatment System at OU 7, and PSITS.

Present Landfill Closure Plan DOE RFP IHSS 114	
The Present Landfill was placed in operation on August 14, 1968, after a study determined that a landfill operation would be the most efficient and economical means to dispose of the plant's nonradioactive solid waste. A number of available sites within the plant's boundaries were evaluated. The site selected was located on the western end of an unnamed tributary to Nort Walnut Creek as shown on figure 1.

Disposition of Water - Sanitary Landfill	
Disposition of Water - Sanitary Landfill: A meeting was held February 12, 1974 to discuss alternatives related to the disposition of water from the sanitary landfill. This water is being impounded with process waste treatment effluent. One possible alternative is to sprinkle the water on the top of the hill to the north of the landfill. Discussion of this alternative led to questions concerning the background conditions in the area to be sprinkled and the impact of the water from the landfill. In response to these questions soil samples were taken in the area to be sprinkled. A copy of the laboratory analysis report of these samples is enclosed.
