EG&G proposes to delete Environmental Evaluation (EE) in the production areas	
EG&G Rocky Flats, Inc. proposes to delete Environmental Evaluations (EE) for Operable Units (OUs) that are located at least partly within the Production Area [Industrial Area (IA)] (OU04, OU08, OU09, OU10, OU12, OU13, OU14, OU15, and OU16), and to treat this entire area as a "Source Term" for contaminants entering adjacent OUs. Most of these areas are paved and any vegetation present is either landscaping plants or weeds. The EEs for these are inappropriate.

Modification to Work in the Interagency Agreement (IAG)	
Modification to Work in the Interagency Agreement (IAG) - Pursuant to Part 32, Paragraph 191 (Additional Work or Modification to Work) of the IAG, the Colorado Department of Health (CDH), and US Environmental Protection Agency (EPA) hereby notify the US Department of Energy (DOE) that certain Individual Hazardous Substance Sites (IHSS) included in several Operable Units (OU), and the investigatory and remedial work associated with them, are now to be addressed as part of alternate OUs. The rationale for this change is that the listed IHSSs all constitute part of the Original Process Waste Lines (OPWL) and will be investigated and remedied as such. These changes were recommended by DOE in the now approved OU09 Phase I Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI) Work Plan (WP). [Changes: Individual Hazardous Substance Sites (IHSS) 122 from OU13 to OU09; IHSS 123.2 from OU08 to OU09; IHSS 124 from OU10 to OU09; IHSS 125 from OU08 to OU09; IHSS 126 from OU08 to OU09; IHSS 127 from OU08 to OU09; IHSS 132 from OU08 to OU09; IHSS 146 from OU08 to OU09; IHSS 147.1 from OU12 to OU09; IHSS 149 from OU08 to OU09; IHSS 159 from OU08 to OU09; and IHSS 215 from OU15 to OU09]

Re expedited closure approval for Bench Scale Treatment Unit 32	
Draft letter to the Colorado Department of Health (CDH) and requests expedited closure approval for Bench Scale Treatment Unit 32. This unit has been used for cyanide treatment in the Building 881 General Laboratory. As part of the laboratory renovation project, it needs to be removed by June 1989. Discusses why the failure to close Unit 32 in a timely manner will cause delays in the renovation of the General Laboratory in Building 881, and describes the Bench Scale Treatment Unit 32 for Cyanide Conversation.

The CDH approves OU09 EE TM. EE will act as model for other IA OUs.	
The Colorado Department of Health (CDH) approves the Operable Unit OU09: Original Process Waste Lines (OPWL) Environmental Evaluation (EE) Technical Memorandum (TM). Not all of the OUs in the industrialized portion of the Rocky Flats Plant (RFP) are scheduled for a two-phase Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI). Therefore, since this EE will act as a model for the other IA OUs, and since this EE is currently structured in a two-phase investigation format, it will be up to the US Department of Energy, Rocky Flats Office (DOE/RFO) to initiate planning that can complete an entire EE for a one-phase RFI/RI OU.

Provides CDH comments re OU15 Phase I RFI/RI, August 1994	
Provides Colorado Department of Health (CDH) Hazardous Waste Management Division (HZMD) review comments on the Phase I Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI), OU15, August 1994. The Division finds the overall quality of this draft report to be very high and the attached comments are largely editorial clarifications and should not require major revision to the Final Phase I RFI/RI Report. US Environmental Protection Agency (EPA) comments to be provided under separate cover.

Final Phase I Resource Conservation Recovery Act (RCRA) Facility Investigation / Remedial Investigation (RFI/RI) Work Plan (WP), Rocky Flats Plant (RFP) Operable Unit OU15: Inside Building Closures Report, January 1995 - Text. The specific objectives of the OU15 Phase I RFI/RI site investigation, as presented in the Work Plan (WP), are to {1} characterized site physical features; {2} define contaminant sources; {3} determine nature and extent of contamination; {4} describe contaminant fate and transport; and {5} provide a Baseline Risk Assessment (BRA). The following activities were completed for each Individual Hazardous Substance Site (IHSS) during the OU15 field investigations: a review of new and/or additional information, a visual inspection and documentation of current conditions at the IHSS, and sampling and analysis of surfaces within and around the IHSS. The sampling and analysis program included the collection of radiological and beryllium (Be) smear samples and hot water Rinsate samples (including verification samples). In addition, final radiological surveys were performed during the Stage I and II field investigations.

Re Milestone schedule for OU15 - Change	
<p>The Interagency Agreement (IAG) schedule for Operable Unit OU15 includes submittal of the Draft and Final Phase I Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI) Reports due on August 1, 1994 and January 4, 1995 respectively. The scope of the OU15 process was changed in order to integrate the requirements of the OU15 Closure Plans previously submitted for OU15 Individual Hazardous Substance Sites (IHSS). Although Closure Plans are no longer necessary and a significant cost savings was realized, the rescoping process contributed to a delay in approval of the Phase I RFI Work Plan (WP) for OU15 from November 24, 1992 to March 8, 1993, which in turn has delayed fieldwork.</p>

However, VOCs are unlikely to be present at detectable levels with non-intrusive sampling methods on the floor surface.</p>

<p>The Colorado Department Health (CDH) Hazardous Waste Management Division (HZMD) and the US Environmental Protection Agency (EPA) approve the Standard Operating Procedure (SOP) for Collection of Floor / Equipment Rinsate Samples for Operable Unit OU15. They further concur with the guidance contained in the accompanying letter, which would limit the collection of VOC samples to at least one per Individual Hazardous Substance Site (IHSS). An exception to this general guidance should be made, however, in the case of IHSS 204, the Original Uranium Chip Roaster. In this case, volatile and semi-volatile compounds are the main contaminants of concern and the various identified sample locations should be sampled separately.</p>

Re IAG milestone schedule for OU15	
In response to August 9, 1993 letter, the US Department of Energy (DOE) believes that discussions of milestone extensions or OU15 are premature. However, DOE Headquarters has agreed to review times concurrent with DOE/RFO in many cases, particularly when an Interagency Agreement (IAG) milestone is involved. It should be assumed at this time that the OU15 Phase I Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI) Report will be completed in accordance with Table 6 of the IAG.

Discusses active tanks within Operable Unit OU09, including Individual Hazardous Substance Sites (IHSS) at OU10, and OU15: Inside Building Closures. These tanks are active units under the Interagency Agreement (IAG); therefore, the US Department of Energy, Rocky Flats Office (DOE/RFO) requests that EG&G Rocky Flats, Inc. not initiate Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI) activities at these IHSSs. [Applies to Interim Status Units, Permitted Units, and Units no under RCRA and the Colorado Hazardous Waste Act (CHWA)]

Re past due regulatory agency comments on the OU15 FSP TM1	
Informs the US Department of Energy, Rocky Flats Office (DOE/RFO) of the negative impact that the delay of receipt of official comments on the Phase I Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI) Field Sampling Plan (FSP) Technical Memorandum TM1 from the Colorado Department of Health (CDH) and the US Environmental Protection Agency (EPA) may have on the schedule for OU15. In order to prevent a negative impact to the schedule for OU15, official comments must be received from the regulators no later than April 15, 1994 to allow completion of TM1 by May 2, 1994.

Provides the US Department of Energy, Rocky Flats Field Office (DOE/RFFO) comments on the Draft Phase I Resource Conservation Recovery Act (RCRA) Facilities Investigation / Remedial Investigation (RFI/RI) Report for OU15: Inside Building Closures. The most important question raised by the comments is the radionuclide contamination in Individual Hazardous Substance Site IHSS 204, the Original Uranium Chip Roaster. It is the reviewers understanding that the radiation emitted in the rooms comprising this IHSS may exceed the radiation worker protection levels in 10 CFR 835, DOE Order 5480.11, and 29 CFR 1910.

Based on the results of fieldwork completed per the approved Phase I RFI/RI Work Plan (WP) for OU15 and presented within the Draft Phase I RFI/RI Report for OU15, "No Action" is necessary to be protective of human health and the environment at five of the six OU15 Individual Hazardous Substance Sites (IHSS). The exception is IHSS 204: the Original Uranium Chip Roaster, from which worker exposure could exceed the five (5) roentgen equivalent man (rem) per year standard promulgated by the US Department of Energy (DOE), the Atomic Energy Commission (AEC), and Nuclear Regulatory Commission (NRC). The Chip Roaster should be removed from the Interagency Agreement (IAG) schedule for OU15, it's future use for waste treatment evaluated, and its closure addressed as part of Building 447 National Conversion Pilot Program (i.e., economic development) and/or Decontamination and Decommissioning (D&D).

Provides an explanation of date discrepancies	
Provides an explanation of date discrepancies: The current CERCLA Administrative Record shows the Closure Strategy Paper (revised January 1995) officially transmitted to US Department of Energy, Rocky Flats Field Office (DOE/RFFO) on January 17, 1995 and the DOE/RFFO submittal to the regulatory agencies on January 6, 1995. The reason that the official EOD/RFFO transmittal of the Operable Unit OU15 Closure Strategy Paper occurred prior to EG&G Rocky Flats, Inc.'s official transmittal is that DOE/RFFO was informally provided with a copy of the document. DOE/RFFO chose to submit the document without receiving the formal transmittal from EG&G.

CAD/ROD, OU15: Inside Building Closures, dated August 1995	
<p>Corrective Action Decision / Record of Decision (CAD/ROD), Operable Unit OU15: Inside Building Closures, dated August 23, 1995. The US Department of Energy (DOE) has determined that no remedial action is necessary to be protective of human health and the environment at IHSSs 178, 211, and 217 because they meet the clean closure requirements of the Rocky Flats (RF) Resource Conservation and Recovery Act (RCRA) Permit (RFRP) and the Federal occupational radiation protection standards. At IHSSs 179, 180, and 204, no remedial action is currently necessary, because they meet the clean closure requirements of the RFRP and the RF radiological control program is in compliance with Applicable or Relevant and Appropriate Requirements (ARARs) / To Be Considered (TBC) criteria and other identified protective standards. Future Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) actions may be required at the time of ultimate disposition of the buildings. Because the remedy will not result in hazardous substances remaining onsite above ARARs, TBCs, or protective standards, a five (5) year review is not required.</p>
